

## CIPA conference in Avila, Spain

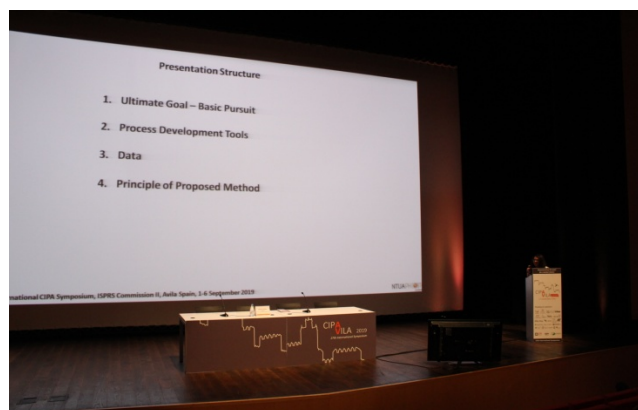

Thanks to this scholarship, I was able to attend this year's CIPA conference in Avila, Spain in September 2019. My paper was dealing with automated process to detect edges in unorganized point clouds.

*Awarding scholarships at the opening ceremony of the conference.*

Attending this conference and presenting my paper in a high skilled audience gave me the opportunity to get in touch and have constructive discussions with colleagues specialized in this particular scientific field.

In addition, I believe that the paper presented in this conference promotes and contributes to the further progress of research related to the development of fast and smart methods on the enhancement of cultural heritage and antiquities in particular.

*Presentation of my paper.*

Furthermore, the overall experience I gained during the process of preparation / participation / presentation is absolutely essential for my next research steps towards the compilation of my PhD thesis.

Given the above, not to mention the fact that I could not afford the attendance at this conference by my own financial means, your financial support has been vital to me. I am grateful to your foundation for the encouragement and support.

Yours sincerely,

Aikaterini Mitropoulou
