

## ISPRS Congress Report

Name: João Paulo Sampaio Werner - Phd Student at University of Campinas, Brazil.

At the XXIV ISPRS Congress in Nice, France, I had my first experience of participating in an international congress abroad. During the congress, I had the honour to present to the community in the field of photogrammetry and remote sensing one of the works of my doctoral thesis. Although it was a challenging task, it was significant for my professional career.

It felt good to join the enthusiasm of researchers worldwide, who are always looking to answer important scientific questions and are attentive to the development of new technologies. With that, I knew I was in the right place, which motivated me to continue my research related to monitoring agriculture in Brazil using new technologies in remote sensing.

I consider the week I was in Nice participating in the congress a great learning period. I will keep the memories of seeing young researchers and widely recognized researchers discussing and doing science together at a conference. For all these experiences, I am grateful to the ISPRS Foundation for making it possible for me to participate in the conference by awarding the travel grant.
