

On September 1, 2023, it was with pleasure that I stepped into the mysterious and ancient land of Egypt through a TIF grant to participate in ISPRS GSW 2023. In just one week, the open and quaint city of Cairo left an unforgettable impression on me.

This is my first time to go abroad to participate in such a large-scale academic event. At the opening ceremony of ISPRS, I could really feel the importance that the GSW organizers and Egyptian officials at all levels attached to this conference. Like-minded friends from all over the world are here to share the academic feast. Here, I was given a rare stage to present my research content. I am honored that my research has been recognized by experts from all over the world and I have won the best paper in the "Precision GNSS" workshop.

I would like to thank TIF for being able to provide me with this grant. It allowed me the opportunity to come and participate in such an academic feast. Not only did I get to present my latest research results, but I also enjoyed a pleasant journey. I hope that TIF will continue to support young researchers with excellent potential, so that researchers from all over the world can share every academic feast of ISPRS.
