

Thank you ISPRS Geospatial Week 2023 for

Wonderful, Informative, very well-arranged, educative, enlightening, panoramic, engaging, fraternized and excellent event

The adjectives, are less to describe the time from 2-7 September, 2023. The ISPRS Geospatial Week is held biennially gave me opportunity this year to participate by presenting my work in oral presentation and also bestowed the TIF grant of 1500 USD.

The blessing, as a young researcher making up for the conference without grant was difficult and missing such an informative event was not an option. Thanks to the ISPRS GSW team for the support, due which, I could in person attend the event, showcase my ideas and work, learn from others experience and perspectives, look forward for collaborative works, connect with best of researchers and mentors in the domain of LiDAR and most importantly take back lot of key points to improve and build upon my research.

The sunlight, a few segments of work, I am struggling, was confused in and uncertain about were well covered in the tutorials and workshops. Meeting the authors from different working groups further cleared our doubts on how we can go forward with what we want to explore in our research domain, what are the resources we need and what more we can do with the existing data and resources we have. The industrial talks and exposure was also thought provoking.

The evening breeze of Egypt across Nile with the new acquaintances was a pleasant experience. The event was so well organized not only in scientific view but also in social dinners and evening outings. The welcome dinner, Nile cruise and formal dinner at the castle were life remembrance.

Every moment in the conference, was an opportunity, to learn, to enjoy, to experience and be incited for future work.

With lots of gratitude

Jayati Vijaywargiya

PhD scholar and Researcher

Indian Institute of Space Science and Technology, India
