nFrames GmbH Profile

nFrames is a company from Stuttgart, Germany creating software for 3D surface reconstruction from images. The technology is provided as standalone software and library - enabling the integration into professional production workflows and existing software solutions.

Beside this flexibility, we also stand for precision, scalability, usability and automation. As passionate engineers, developers and scientists from the field of Photogrammetry and Computer Vision, we constantly integrate recent research into our application frameworks. Furthermore, we provide support and consulting not only with our software experience, but also with general Photogrammetry, block acquisition design and sensor design.

The SURE Technology is designed for professional production. It is for years in use for large scale country wide production by industry as well as national mapping and space agencies. The transparent workflow can be split up and integrated in parts into given workflow with low efforts. The technology is constantly improving while considering specific requirements in production.
