

## **Workshop on lessons learned from volunteers' interactions with geographic citizen science applications, 27 April 2018, London**

The goal of this workshop is to initiate discussions by collecting and sharing academic and industrial expertise from various contexts, with the ultimate aim to understand how to produce better designs which improve effectiveness and provide an improved user experience in and with geographic citizen science. The workshop is organised by the internationally-renowned Extreme Citizen Science (ExCiteS) group at UCL and the EU-funded [COST Action](#) on citizen science to promote creativity, scientific literacy and innovation throughout Europe, in collaboration with [ISPRS WG V/3](#) on the Promotion of Regional Collaboration in Citizen science and Geospatial Technology and the [ICA Commission on Use, User and Usability Issues](#). Expected outcomes include a collection of the presented case studies in a book and a network to inspire and work on future collaboration opportunities.

Participation to the event is free and registration using the following link with a brief statement of interest is required since the spaces are limited.
