

Report on the experiences of attending at the ISPRS Technical Commission I Symposium

This report details my experiences at the ISPRS Technical Commission I Midterm Symposium “Innovative Sensing – From Sensors to Methods and Applications”, held at Karlsruhe, Germany, from October 09th to 12th. I was only able to attend the Symposium thanks to the Travel Grant provided by The ISPRS Foundation (TIF).

The symposium gathered several experts from different Universities, Institutes and Companies that work in similar topics, which made possible to meet and interact with them. The paper presentation achieved two of my main goals, which were: the dissemination of an important aspect of my Thesis research; as well as receiving critics, advises and recommendations from the audience. Such discussion with other professionals is important towards improvements on the proposed solution. In addition, there were several great keynotes and oral sections, as well as posters presented at the symposium, most of the content being related to my research.

I would like to acknowledge the support from The ISPRS Foundation for the Travel Grant, the symposium organizers that provided a reduced registration fee, as well as my advisor Dr. Mauricio Galo who encouraged the submission and participation at the event.
