ISPRS Technical Commission VII Symposium
100 Years ISPRS
Advancing Remote Sensing Science

Vienna, Austria
July 5 – 7, 2010

Papers accepted on the basis of peer-reviewed full manuscripts

Editors
W. Wagner, B. Székely

Organised by
ISPRS Technical Commission VII
Thematic Processing, Modeling and Analysis of Remotely Sensed Data

Supported by
Leica Geosystems, Vexcel Imaging, Stadt Wien, ESRI, RIEGL LMS, TU Wien

ISSN 1682-1777

## Preface

Symposium Committee ................................................................. x

Reviewers ....................................................................................... xi

## Papers

The effect of biomass and scanning angle on the laser pulse transmittance
*Eero Ahokas, Juha Hyyppä, H. Kaartinen, Antero Kukko, Sanna Kaasalainen, and Anssi Krooks* .......................... 1

Analysis of spatial and temporal evolution of the NDVI on vegetated and degraded areas in the central Spanish Pyrenees
*Luis Carlos Alatorre, and S. Beguería* ............................................ 7

Estimating sub-pixel to regional winter crop areas using neural nets
*Clement Atzberger, and Felix Rembold* ......................................... 13

Integration of contextual information for the transfer of beliefs in an information sources fusion system-application to detection and classification of trees crowns
*Zouhour Ben Dhiaf, A. Hamouda, and J. Desachy* .......................... 19

Comparison of Error Propagation in Block Orientation: An Analytical Approach
*Jackson Cothren, and Burkhard Schaffrin* ...................................... 25

A review on image segmentation techniques with remote sensing perspective
*Vivek Dey, Y. Zhang, and M. Zhong* ............................................. 31

Assessment system of GIS-objects using multi-temporal imagery for near-realtime disaster management
*Daniel Frey, and Matthias Butenuth* ............................................. 43

The potential of a space altimeter when measuring significant wave height
*Boris Y. Grishechkin, and A.I. Baskakov* ....................................... 49

Classification of settlement areas in remote sensing imagery using conditional random fields
*Thorsten Hoberg, and Franz Rottensteiner* ..................................... 53

Estimation of timber assortments using low-density ALS data
*Markus Holopainen, Mikko Vastaranta, Jussi Rasinmäki, Joumi Kalliovirta, Antti Mäkinen, Reija Haapanen, Timo Melkas, Xiaowei Yu, Juha Hyyppä, and Hanna Hyyppä* .......................... 59

Towards Fully Automatic Photogrammetric Reconstruction Using Digital Images Taken From UAVs
*Arnold Irschara, Viktor Kaufmann, Manfred Klopschitz, Horst Bischof, and Franz Leberl* ................................. 65

Exterior orientation of line-array CCD images based on quaternion spherical linear interpolation
*Gangwu Jiang, Ting Jiang, Hui Gong, and Xin Wang* .......................... 71

Theoretical frameworks of remote sensing systems based on compressive sensing
*Jiying Liu, Jubo Zhu, Fengxia Yan, and Zenghui Zhang* .......................... 77
Comparison of terrestrial laser scanner and synthetic aperture radar data in the study of forest defoliation
Sanna Kaasalainen, Juha Hyyppä, Mika Karjalainen, Anssi Krooks, Päivi Lytyikäinen-Saarenmaa, Markus Holopainen, and Anttoni Jaakkola ................................................................. 82

True Orthophoto Creation Through Fusion of LiDAR Derived Digital Surface Model and Aerial Photos
Akira Kato, L.M. Moskal, P. Schiess, Donna Calhoun, and Mark E. Swanson ........................................ 88

Mapping of built-up area density from satellite images using morphological granulometries
Akila Kemmouche, R. Khedam, and C. Mering ................................................................. 94

Analysis of BRDF characteristics of forest stands with a digital aerial frame camera
Tatjana Koukal, and Werner Schneider ................................................................. 100

Land cover identification using polarimetric SAR images
Assia Kourgli, M. Ouarzeddine, Y. Oukil, and A. Belhadj-Aissa ................................................................. 106

Analysis of spatiotemporal difference of NDVI in an arid coal mining region using remote sensing
Shaogang Lei, and Zhengfu Bian ................................................................. 112

A framework of polarimetric SAR filter based on independency of intensity and polarimetric information
Pingxiang Li, Shaoping Deng, Jixian Zhang, Guoman Huang, and Zheng Zhao ................................................................. 117

Evaluation of spectral and texture features for object-based vegetation species classification using support vector machines
Zhengrong Li, Ross Hayward, Jinglan Zhang, Hang Jin, and Rodney Walker ................................................................. 122

Empirical comparison of machine learning algorithms for image texture classification with application to vegetation management in power line corridors
Zhengrong Li, Yuee Liu, Ross Hayward, and Rodney Walker ................................................................. 128

Assessment of the multiple endmember spectral mixture analysis (mesma) model applied to the HYPERION/EO-1 hyperspectral data of the coastal plain of Rio Grande do Sul, Brazil
Rodrigo M. Linn, Silvia Beatriz Alves Rolim, and Lênio Soares Galvão ................................................................. 134

Urban Road Tracking by Fusion of SVDD and Region Adjacency Graphs from VHR imagery
Zhengjun Liu, Xiangguo Lin, Jixian Zhang, and Pengxian Pu ................................................................. 139

Validation of the radiometric processing chain of the Leica ADS40 airborne photogrammetric sensor
Lauri Markelin, Eija Honkavaara, Ulrich Beisl, and Ilkka Korpela ................................................................. 145

Describing buildings by 3-dimensional details found in aerial photography
Philipp Meixner, and Franz Leberl ................................................................. 151

Terrain echo probability assignment based on full-waveform airborne laser scanning observables
Werner Muecke, Christian Briese, and Markus Hollaus ................................................................. 157

Airborne Doppler navigation system application for measurement of the water surface backscattering signature
Alexey Nekrasov ................................................................. 163

Aerial photo building classification by stacking appearance and elevation measurements
Thuy Thi Nguyen, Stefan Kluckner, Horst Bischof, and Franz Leberl ................................................................. 169

Multitemporal RADARSAT-2 polarimetric SAR data for urban land-cover mapping
Xin Niu, and Yifang Ban ................................................................. 175
Fusion of optical and radar remote sensing data: Munich city example
Gintautas Palubinskas, and Peter Reinartz ...................................................... 181

Tidal wetland monitoring using polarimetric synthetic aperture radar
Sang-Eun Park, D. Kim, H.-S. Lee, W. M. Moon, and Wolfgang Wagner .................. 187

Automatic detection of buried channel deposits from dense laser altimetry data
Boudewijn M.J. Possel, Roderik C. Lindenbergh, and Joep E.A. Storms ...................... 192

Land use and land cover classification using RADARSAT-2 polarimetric SAR imagery
Zhixin Qi, Anthony Gar-On Yeh, Xia Li, and Zheng Lin ........................................ 198

Four reduced-reference metrics for measuring hyperspectral images after spatial resolution enhancement
Shen-En Qian, and Guangyi Chen ......................................................................... 204

A comparative case of study of image sharpening

Mapping key hydrological variables using remotely sensed images integrated in a distributed water balance model

Detection of 25-year land-cover change in a critical watershed in southern philippines using LANDSAT MSS and ETM+ images: importance in watershed rehabilitation
Jojene R. Santillan, Meriam M. Makinano, and Enrico C. Paringit ......................... 219

Remote Sensing and GIS in Inflow Estimation: The Magat Reservoir, Philippines Experience
Czar Jakiri S. Sarmiento, Ryan James V. Ayson, Rhodora M. Gonzalez, and Peter Paul M. Castro .......................................................... 227

A supervised spectral substratum classifier to classify images with fuzzy memberships
Zongyao Sha, and Yichun Xie ............................................................................. 233

Image Texture Preservation in Speckle Noise Suppression
Ali Shamseddini, and John C. Trinder .................................................................. 239

Texture analysis to improve supervised classification in IKONOS imagery
Anna Nora Tassetti, E.S. Malinverni, and Michael Hahn ........................................ 245

The registration of 3-D model and 2-D image using point and line features
Tee-Ann Teo, and Liang-Chien Chen .................................................................. 251

Estimation of aerosol and air quality fields with PM MAPPER – an optical multispectral data processing package
Thi Nhat Thanh Nguyen, S. Mantovani, and M. Bottomi ........................................ 257

Change visualization through a texture-based analysis approach for disaster applications
Daniel Tomowski, Sascha Klonus, Manfred Ehlers, Ulrich Michel, and Peter Reinartz ......................................................... 263

Remote Sensing, Geographic Information Systems and Shannon’s Entropy: Measuring Urban Sprawl in a Mountainous Environment
Loureal Camille O. Verzosa, and Rhodora M. Gonzalez ........................................ 269

Automated Extraction of Plantations from IKONOS Satellite Imagery Using a Level Set Based Segmentation Method
Karsten Vogt, Björn Schueermann, Christian Becker, Torsten Büschenfeld, Bodo Rosenhahn, and Jörn Ostermann ... 275
Retrieval of biophysical vegetation products from RapidEye imagery
Francesco Vuolo, Clement Atzberger, Katja Richter, Guido D’Urso, and Jadunandan Dash .............................. 281

Pansharpening – Relating Quantitative Quality Measures to Impact on Results of Subsequent Processing Steps
Uwe Weidner ........................................................................................................................................... 287

Mapping deformation of man-made linear features using dinsar technique
Hongan Wu, Yonghong Zhang, Jixian Zhang, and Xiaoyong Chen .............................................................. 293

Structural high-resolution satellite image indexing
Gui-Song Xia, Wen Yang, Julie Delon, Yann Gousseau, Hong Sun, and Henri Maître ........................................ 298

Multistage algorithm for lossless compression of multispectral remote sensing images
Alexander Zamyatin .................................................................................................................................... 304

Monitoring impervious surface sprawl using tasseled cap transformation of LANDSAT data
Qian Zhang, and Yifang Ban ............................................................................................................ 310

Precise Processing of SPOT-5 HRS and IRS-P5 Stereo Imagery – For the Project of West China Topographic Mapping at 1:50,000 Scale
Li Zhang, and Jixian Zhang .......................................................................................................................... 316

Fusion of ascending and descending polarimetric SAR data for color orthophoto generation
Jixian Zhang, Jujie Wei, Guoman Huang, and Yonghong Zhang ...................................................................... 323

Author Index .............................................................................................................................................. 329

Keyword Index ........................................................................................................................................... 331
Preface

These are the proceedings of the ISPRS Technical Commission VII Symposium that was held on July 5–7, 2010, at the Vienna University of Technology, Austria. The proceedings consist of two parts: Part A collects all papers that were accepted on the basis of peer-reviewed full manuscripts; Part B contains papers which have been selected based on a review of the submitted abstracts.

The topic of the symposium was “100 Years ISPRS – Advancing Remote Sensing Science” to celebrate the foundation of the International Society for Photogrammetry (ISP) on July 4, 1910, on the initiative by Prof. Eduard Doležal. The Society changed its name to the International Society for Photogrammetry and Remote Sensing (ISPRS) in 1980, reflecting the increasing integration of the two disciplines. In our modern digital age, photogrammetry and remote sensing have virtually grown together, having as their common scope the extraction of reliable information from non-contact imaging and other sensor systems about the Earth and its environment through recording, measuring, analysing and representation.

Given the particular occasion the themes of the symposium extended beyond the traditional realms of Commission VII (“Thematic Processing, Modelling and Analysis of Remotely Sensed Data”) by inviting contributions from the other ISPRS Commissions as well. Contributions that provided a comprehensive overview of the major research areas in remote sensing, highlighting past achievements and identifying challenges for the future, were particularly welcome. The conference topics were

- Multi-spectral and hyperspectral remote sensing
- Microwave remote sensing
- Lidar and laser scanning
- Geometric modelling
- Physical modelling and signatures
- Change detection and process modelling
- Land cover classification
- Image processing and pattern recognition
- Data fusion and data assimilation
- Earth observation programmes
- Remote sensing applications
- Operational remote sensing applications

We would like to take this opportunity here to sincerely thank the reviewers of both the full-papers and the abstracts for their valuable time and expertise! Each paper within Part A was reviewed by at least two reviewers and revised according to their comments. Only 60% of the submitted full papers finally made it through this review process. Also each abstract was reviewed by two peers, most of them by even three of more peers. Without question, the reviewer’s effort was not in vain as it has helped to raise the quality of the papers and has allowed us to put together a high-quality technical programme.

Nevertheless, we also would like to add some self-criticism here. Within ISPRS the importance of a proper review process is broadly recognised. Also, more and more ISPRS colleagues rightfully request that all papers published in the *International Archives of the Photogrammetry, Remote Sensing and Spatial Information Sciences* (such as those contained in the current volume) shall be covered by prominent indexing and abstracting databases. Yet, there is no standard ISPRS reviewing system, nor is there a professional editorial support and indexing service. Consequently, every organiser of an ISPRS workshop, symposium or congress needs to reinvent the wheel by building up his/her own system for reviewing and handling the scientific contributions and for producing the proceedings. Having never organised an event with more
than hundred people, the learning curve has been particularly steep for us. As a result, mistakes were unavoidable and we would like to apologise with the authors and reviewers for any inconvenience that they may have experienced. We are confident that together we will be able to solve this challenge for future scientific meetings to the benefit of our discipline.

Finally, we want to highlight the very positive fact that we have received many excellent papers from scientists from developing regions. This suggests to us that ISPRS has been quite successful in stimulating the exchange of scientists from around the world and diverse cultural background. This will become the ever more important as climate change, continued population growth and shrinking natural resources have all become truly global problems that require, as one small part of the solution, global observation capabilities to better understand of how we have to act locally.

Vienna, June 2010

Wolfgang Wagner          Balázs Székely
Symposium Committee

Organising Committee

Wolfgang Wagner, Vienna University of Technology, Austria (Chairman)
Balázs Székely, Vienna University of Technology, Austria (Scientific Coordinator)
Wouter Dorigo, Vienna University of Technology, Austria
Michael Franzen, Bundesamt für Eich- und Vermessungswesen, Austria
Juha Hyyppä, Finnish Geodetic Institute, Finland
Josef Jansa, Vienna University of Technology, Austria
Norbert Pfeifer, Vienna University of Technology, Austria
Werner Schneider, University of Natural Resources and Applied Life Sciences, Austria
Klaus Steinnocher, Austrian Institute of Technology, Austria

Scientific Committee

Richard Bamler, DLR, Germany
Arnold Dekker, CSIRO, Australia
Diego Fernandez, ESA
Wolfgang Förstner, Bonn University, Germany
Garik Gutman, NASA, USA
Michael Schaepman, Universität Zürich, Switzerland
Johannes Schmetz, EUMETSAT
Uwe Sörgel, Leibniz Universität Hannover, Germany
Niko Verhoest, Ghent University, Belgium
Jixian Zhang, Chinese Academy of Surveying and Mapping, China
Yun Zhang, University of New Brunswick, Canada
Qiming Zhou, Hong Kong Baptist University, China
We gratefully acknowledge the support of the following colleagues who generously helped us in the review of the full-papers and abstracts:

Luis Carlos Alatorre  
Paul Aplin  
Roman Arbiol  
Costas Armenakis  
Clement Atzberger  
Christoph Aubrecht  
Manos Baltsavias  
Richard Bamler  
Georg Bareth  
Zoltan Bartalis  
Annett Bartsch  
Enton Bedini  
Eyal Ben-Dor  
Santosh P. Bhandari  
Horst Bischof  
Christian Briese  
Manfred Buchroither  
Ana Cabral  
Liang-Chien Chen  
Jan Clevers  
Rene Colditz  
Jackson Cothren  
Jean-Francois Crétaux  
Michele Crosetto  
Wouter Dorigo  
Peter Dorninger  
Ian Dowman  
Diego Fernandez  
Michael Franzen
