

Latin American Activities – 2010

The main purpose was to promote the activities of ISPRS in the region, help the member to be more active in ISPRS.

The most important activities that took place and were coordinated by the region representative are:

- Encouraging the participation of the Geographic Institutes and professional associations in the “Latin American Remote Sensing Week”(LARS) 2010 – Chile October 4 through 8. My work was to promote the conference in Latin-American countries.
- Organizing SELPER’s Symposium, celebrated in Guanajuato, Mexico, November 8th through 12th. I was part of the technical committee in charge of selecting the papers, lectures, key note speakers and posters. Presence at the Mike Reslow conference (he made a plenary presentation) and at SELPER’s general assembly.
- Participated at the ISPRS centenary celebrated in Vienna during the month of July.
It is important to mention that in this meeting the MOU was signed between EARsel (Europe) AARS (ASIA), AARSE (AFRICA) y SELPER (Latin-American).
In Vienna I had the opportunity to meet with the Brazilian Society for Cartography, Geodesy, Photogrammetric and Remote Sensing, with the Delegates of “Instituto Geográfico de Chile, and with delegates of the Chilean Air Force.
