

Hello,

I'm Fatemeh Alidoost, a PhD candidate student in photogrammetry at the University of Tehran.

Due to very fast developments of Geomatics sciences, I am very motivated to update and develop my knowledge and skills about the research areas in remote sensing, photogrammetry and spatial information sciences. Therefore, I am planning to attend in the most relevant international conferences during my PhD studies.

Last summer, I awarded the ISPRS Foundation scholarship for attendance at the ISPRS Congress in Prague (Jul. 2016). It can be stated that this conference was a very interesting and vivid conference with a broad range of high level presentations of very good scientific quality which it could bring both a professionally rewarding and personally memorable experience for all of its participants and me.

I could present my research work as a poster paper and discuss about my ideas with other attendances. I think that the TIF travel scholarship provided me a chance to participate in the conference that it helped me to learn new things, discuss hot topics with other participants, discover new approaches to, and solutions for, current techniques and algorithms in my study fields, and overall enhance my prospects of achieving my goals, specially, in my future researches towards a doctoral degree.

I would like to thank the TIF committee especially Prof. Dr. John Trinder and Prof. Dr. Marguerite Madden who found me a qualified researcher and granted me a travel scholarship which allowed me to attend in the ISPRS Congress, gain skills and network for my future.

Sincerely,

Fatemeh Alidoost,
Ph.D. Student
School of Surveying & Geospatial Engineering,
College of Engineering, University of Tehran.
