

Comments from ASPRS members and friends of Jim Case:

I'm deeply saddened by the news of Jim's passing. I worked closely with him as he engineered my passage through the ASPRS journal editorship many years ago. He was a good shepherd and I was in frequent contact with him during that apprenticeship. Please accept me among the list of mourners. Back in the day, he was my beacon as I endeavored to do my job for the Journal. His passage brings me to my knees and I will not never forget his impact on me!
Stan Morain

I fully agree with those who appreciated Jim's contribution to ASPRS and especially he was outstanding as the editor of PE&RS. We worked together at the TOPO Center after he left Autometric. Jim had visited Duane Brown and took notes on Duane's idea for Orbital Constraints on Block Adjustment Mathematics. Jim gave me a copy of his notes which I really appreciated. Later the DMA funded DBA to write the Fortran Program and we used the program on the Apollo Lunar imagery. Jim Case published an epic paper on using constraints in Photogrammetry. I had great respect for Jim and we have lost a great contributor and friend.
Don Light

I was first introduced to Jim Case by Frank Moffitt shortly after graduating. I learned then to use "micrometers" instead of "microns." Who would know that years later that I would become the technical editor for the Manual of Photogrammetry.
George Lee

Jim was an amazing person. I have fond memories of listening to how, as journal editor, he saw our profession changing and, later, how he was adapting to living in Utah. Good man.
Peggy Harwood

The Journal was photogrammetry held in your hands in Jim's day. His editorship was outstanding and he was such a pleasure to work with. Well-versed in the technology, he and had a talent for the editing of one of the great publications of the profession.
Marilyn O'Cuilinn

Sorry to hear of his passing. He tutored me in photogrammetry way back when I was at Army Map Service in the late 1960s, and was a gentle editor when I started my columns. One of his life-long interests was glaciers of the world.
Clifford J. Mugnier

My first memories of Jim go back to working at the Army Map Service when we were all learning Photogrammetry and relied on Jim for his expertise. At many of the Board meetings and Conferences when Jim was there, I enjoyed sharing stories with Jim about hiking and of course skiing being an advent skier myself. He was a great man.
Paul Brooks

Jim was an outstanding individual and contributed to ASPRS for many years. He is an example of a dedicated professional.

Terry Keating

Jim was a true gentleman and a pillar in our profession. He will be missed.

Russ Congalton

Allow me to add my acknowledgement of Jim's contributions to ASP/ASPRS.

Alan Mikuni

We've lost a great contributor to the society and the profession.

Clifford Greve
