

A report on my experiences of attending the Midterm Symposium TC 5 held at IIRS, Dehradun.

This is the first time that I have attended an event organized by the ISPRS. I would like to say that I have taken the right decision on choosing to participate in this symposium. My first impression of the conference would be the systematic flow of the paper review. Coming to the main event of the conference which was held at IIRS, Dehradun, India, the venue was indeed the pertinent place for people around the world. Dehradun offered the pleasant weather and one of the finest tourist spot, where I got to enjoy not only the conference but also got the chance to explore Uttarakhand as a whole.

Now having said about the venue and the place of the conference, I would also like to highlight some of my benefits gained from attending the conference. Firstly, I got the right platform to outcast my research work to a large group of people where the feedback from the other researchers helped me to grow and work more. Secondly, I explored more work on what other people are currently working and also those areas where recent research work in the field of remote sensing are progressing. Thirdly and the most exciting moment was that I got to meet young researchers like me and eventually become friends. I would like to thank the ISPRS for also organizing a welcome dinner where I could interact with the scientists, professor and young researchers from around the world. Finally, those four days long symposium has taught me to progress and explore more. Therefore, I look forward to attending events of ISPRS. Last but not the least; I would like to thank ISPRS for providing me the travel grant which helped me a lot. See you all at Nice, France , 2020!
