

Hello. I am Thi Tran An Nguyen, engineer at National Remote Sensing Department of Vietnam. I am a recipient of a travel grant to attend the ISPRS Commission V Symposium which was held in Dehradun, India from 20-23 November 2018.

First of all, it is my pleasure to express my sincere thankfulness to The ISPRS Foundation for providing me the Travel Grant.

It can be easily seen that attending a scientific conference is such a great opportunity for me. As a map and remote sensing engineer, I am always willing to learn new methods and techniques for my works as well as my research activities. At the ISPRS conference, I met all my lecturers in IIRS campus and more scientists abroad. I also joint some desired topics, there the presentations were very nice and helpful for me in the way of research approaching.

My office National Remote Sensing Department is now implementing the project “Establishment of tracking and data reception station and data processing facility” under ASEAN – India Space Cooperation Program. So, it is much necessary for me to learn more advanced knowledge to work better. After coming back my country, I feel more confident in my current works and also more tasks in the future.

I find out ISPRS is one of the valuable academic conferences which provide a significant occasion for young students, engineers, experts or researchers over the world to focus on their scientific activities. I hope the conference will be much more developed in the future and bring good chances for youthful scientists.

Best regards!

Thi Tran An Nguyen.
