TIF TRAVEL GRANT REPORT – ISPRS GEOSPATIAL WEEK 2019

Geospatial Week, an important event in the area of Photogrammetry and Remote Sensing, was organized by the University of Twente from June 10th to 14th, in Enschede, the Netherlands. Composed of a total of 13 workshops, the conference had excellent presentations in different topics, and was very well organized by the hosts.

The opportunity to participate in Geospatial week allowed the knowledge of different techniques and applications with the use of laser scanning data and UAV, objects of interest to me. In addition, the interaction with researchers from different parts of the planet was a special moment. During this conference, I had the pleasure to know researchers who are reference for my research, as well as establishing contacts with new researchers.

In this regard, I also attended the meeting of The ISPRS Student Consortium, in which Charmaine Cruz, who is the current Newsletter Editor-in-Chief of ISPRS SC, talked about the organization and its purposes. After this, we know the student development laboratory at the University of Twente, and then ended with a moment of interaction between young researchers, in which I knew young researchers from the Philippines, South Korea, Germany, among other countries.

Therefore, I would like to thank you the ISPRS Foundation for Travel-Grant, especially the Emeritus Professor John Trinder, representative of the TIF, who gave us the financial assistance, and the certificate in ceremony during the conference. This assistance made possible my first participation in an event in the area of geosciences in another country. It was a wonderful and enriching experience in terms of learning and network. I hope in the future to attend other conferences like this.

Your sincerely,

Marcela do Valle Machado

Phd Student in Cartographic Sciences

São Paulo State University (UNESP)

Presidente Prudente, São Paulo – Brazil
