

PDA24 Workshop

Moscow, October 2024

From October 7 to 9, the PDA24 Workshop was held at the Moscow Institute of Physics and Technology as part of the scientific activities of Working Group II/8 of the International Society for Photogrammetry and Remote Sensing (ISPRS). It was co-organized by the State Research Institute of Aviation System (GosNIIAS, Russia), Moscow Institute of Physics and Technology (MIPT, Russia) and Moscow State University of Geodesy and Cartography (MI-IGAik) (<https://sites.google.com/view/pda24/home?authuser=0>). To

facilitate participation by a diverse range of researchers, the ISPRS PDA24 workshop is conducted as a hybrid event. Over 35 presentations were submitted to exchange the latest methods, approaches, and achievements in the field of photogrammetry and remote sensing. The event will offer a forum for presentations and discussions of novel ideas and inventions in photogrammetric data processing and analysis for environmental and infrastructure monitoring, change detection and image vectorization, data retrieving and recovering from images. A volume was submitted for publication in the ISPRS Archives.
