

Gratitude to The ISPRS Foundation

“Attending the ISPRS Commission II Mid-Term Technical Symposium in Las Vegas was an immensely valuable experience for my research and professional development. The event provided a unique platform to engage with a global community of researchers and practitioners in the fields of photogrammetry, remote sensing, and spatial information sciences. Presenting my work, titled “*Comparative Evaluation of NeRF Algorithms on Single Image Dataset for 3D Reconstruction*,” to an international audience was both an honor and a learning opportunity. The discussions and feedback received during the symposium have already begun to refine and enhance my research approach.

The financial support provided by The ISPRS Foundation (TIF) Travel Grant was instrumental in enabling my participation. It covered essential expenses, making it feasible for me to attend and actively contribute to this prestigious event. Furthermore, this grant affirmed the relevance and quality of my research, which focuses on employing Neural Radiance Fields (NeRF) for single-image-based 3D reconstruction—a novel methodology that leverages AI to push the boundaries of traditional photogrammetry.

Since the symposium, the insights gained from the technical sessions and the interactions with fellow researchers have significantly impacted my current projects. They have inspired collaborative possibilities and informed the methodological improvements I am now implementing. The publication of my paper in *The International Archives of the Photogrammetry, Remote Sensing and Spatial Information Sciences* has further increased the visibility of my work, opening avenues for future exploration and potential applications in the field.

Once again, I express my heartfelt gratitude to The ISPRS Foundation for supporting young researchers like me. This experience has been pivotal in advancing my academic journey and research aspirations.”

Thank you again for the opportunity.
