

Attending the ISPRS Symposium in Fremantle, Perth, was an inspiring and rewarding experience. Presenting my research on semi-supervised label propagation allowed me to share my work with an international audience and gain valuable feedback that will help refine my future research.

The symposium offered diverse sessions, showcasing the latest advancements in geospatial sciences, particularly the integration of machine learning and remote sensing. These insights sparked ideas for new research perspectives to apply in my work on urban planning and resource optimisation. Networking with researchers and industry professionals was another highlight, providing valuable industry perspectives.

Beyond the academic benefits, the symposium was held in the beautiful coastal town of Fremantle, which provided a warm and welcoming atmosphere.

Participating in the ISPRS Symposium has been a pivotal experience in my academic journey. It has not only advanced my research by exposing me to new ideas and perspectives but has also significantly enriched my professional network and career prospects. I am truly grateful for the opportunity to have attended and presented at this prestigious event and look forward to applying what I have learned to further my work.
