

## **Reflections on Attending GSW 2025 in Dubai as a TIF Grantee**

*By Er. Dristy Bajimaya*

*TIF Grantee, ISPRS GSW 2025*

*Geospatial Research Assistant, CIMMYT, Nepal*

I am deeply grateful to the ISPRS Foundation (TIF) for awarding me the Travel Grant to attend the Geospatial Week (GSW) 2025 held in Dubai, UAE. As an early-career researcher in the field of Geomatics Engineering, this opportunity was both professionally enriching and personally inspiring.

During the event, I attended technical sessions on *Remote Sensing for Agriculture*, *Geospatial AI*, and *Crop Type Mapping*, which enriched my understanding of the latest methods and tools in geospatial science and introduced me to the latest research trends. I especially appreciated the chance to interact with international researchers and gain feedback on my work.

The exposure to diverse perspectives and applications in geospatial science was eye-opening. I also made valuable connections that may lead to future collaboration and mentoring opportunities.

Attending GSW 2025 strengthened my confidence as a young researcher and deepened my commitment to contributing meaningfully to the global geospatial community. I highly encourage other young professionals to apply for the TIF grant—this experience can truly shape one's academic and professional journey.

I sincerely thank the ISPRS Foundation and the organizing committee for this opportunity.
