

NEW HIGH RESOLUTION SYSTEMS AND PRODUCTS

Jolyon D. Thurgood, Ph.D.,
Thornton, Colorado, USA

ABSTRACT

Space Imaging was founded in 1994 to develop a commercial business based on its own high-resolution satellite system. Since then, with the acquisition of the Earth Observation Satellite Company (EOSAT) in 1996 and the expansion of its global operations, Space Imaging has been developing systems required to introduce a new set of products to a variety of traditional and new markets. The author will present a review of the operational systems and ground infrastructure designed to support the new high-resolution satellite system, and will describe the products generated through this system.
