

# The Future of Photogrammetric Production

**David Loescher**

*Solution Definition Manager – Earth Imaging Solution Center*

Security, Government & Infrastructure

# The evolution of Photogrammetry

- **Analogue**
- **Analytical**
- **Digital**
  - now
  - tomorrow
  - What's coming next ?

# Intergraph Visions and goals

Provide solutions across the whole range of Earth Imaging requirements, to help our customers see their world clearly

# Customer workflows

## Data Management

### Data Acquisition

Airborne Imagery  
Digital and Analogue

Airborne LIDAR/SAR

Spaceborne Sensors

Scanning of  
Analogue Images

### Data Exploitation

Geo-reference

DTM Generation/Edit

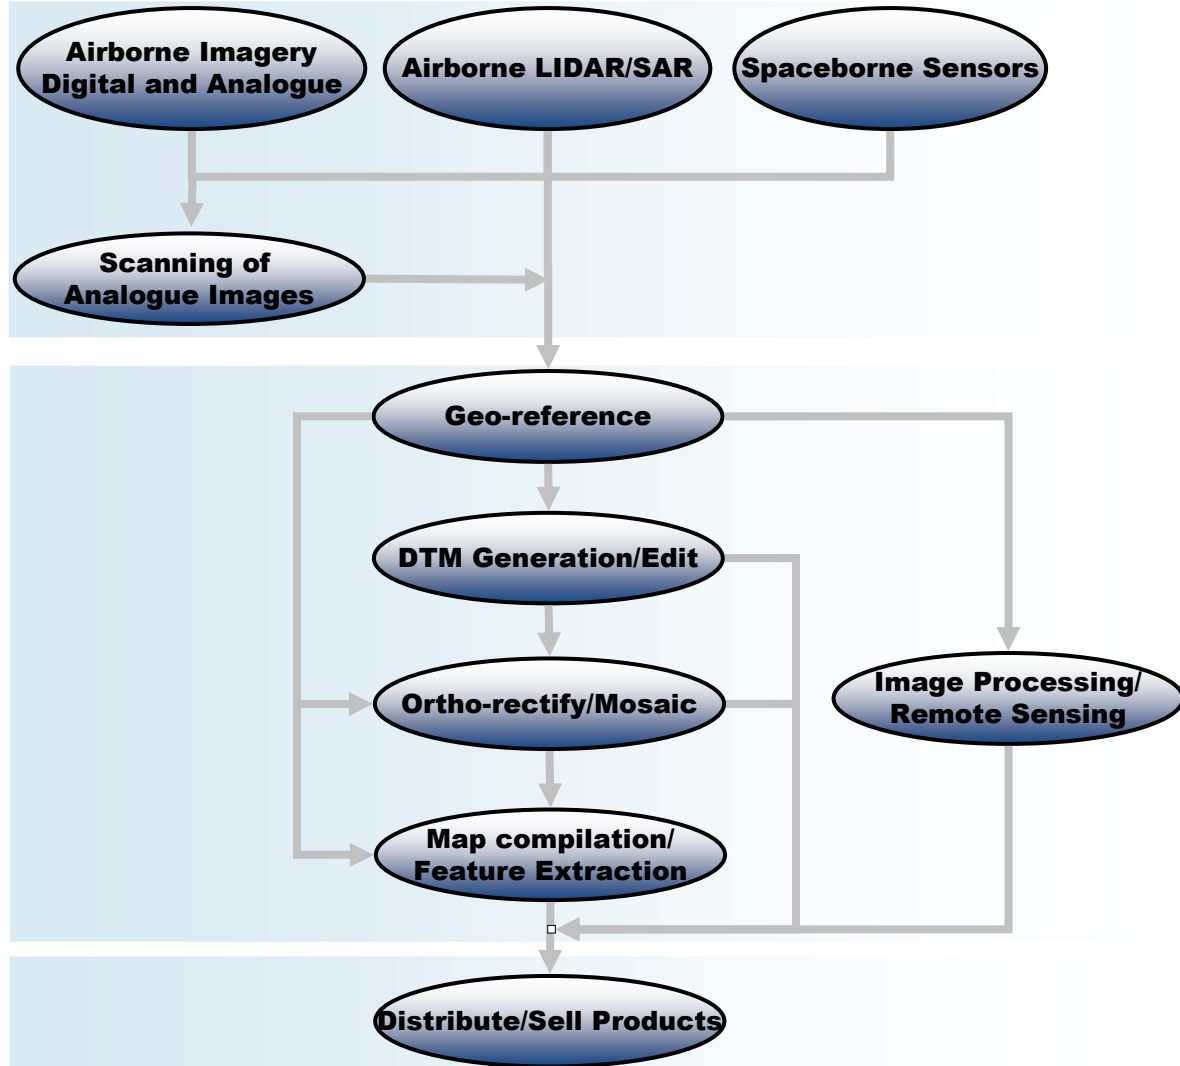

Ortho-rectify/Mosaic

Map compilation/  
Feature Extraction

Image Processing/  
Remote Sensing

### Data Distribution

Distribute/Sell Products

- The Earth Imaging market is currently in change
  - Transition to fully digital workflows
  - Use of aerial digital sensors is becoming commonplace
  - Increasing dependency on the Global GIS Market
  - Demand for open systems and data interoperability
  
- Being all-digital introduces new challenges
  - How to manage, store, view, archive and distribute the data?
  - Demand for instant access to enterprise data through intranet as well as internet
  - Automated tools and efficient production
  - Stereo-based GIS editing and updating

# Customer demands today

- Productivity
  - Automation of workflows
  - Efficiency, reduction in production cost

- Ease of use
  - Consistent interface
  - Easy to learn

# Digital Photogrammetry Today...

End-to-end Digital  
Workflow

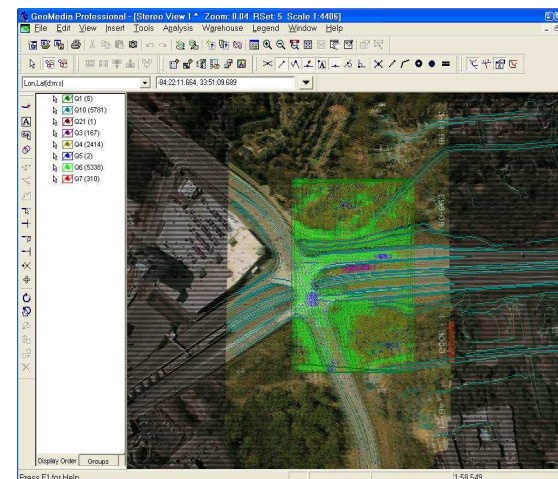

Manual 2D/3D  
Feature Collection

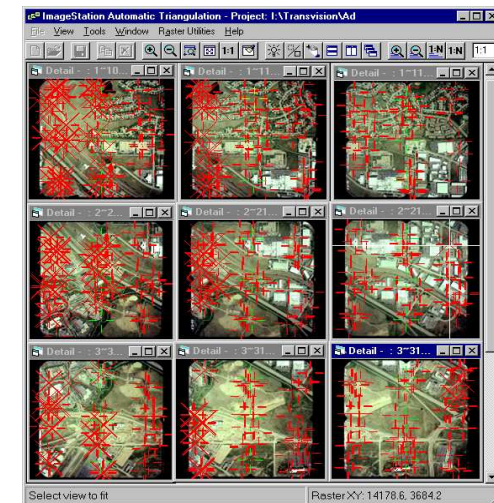

Single Sensor

Photogrammetry &  
GIS are Merging

Automatic  
Operations

# Digital Photogrammetry Trend...

## New Sensors

## Photogrammetry and Geospatial are Integrated

## Speech recognition Voice Synchronisation

## Integrated Real-time Sensors

## Image Analysis Change Detection

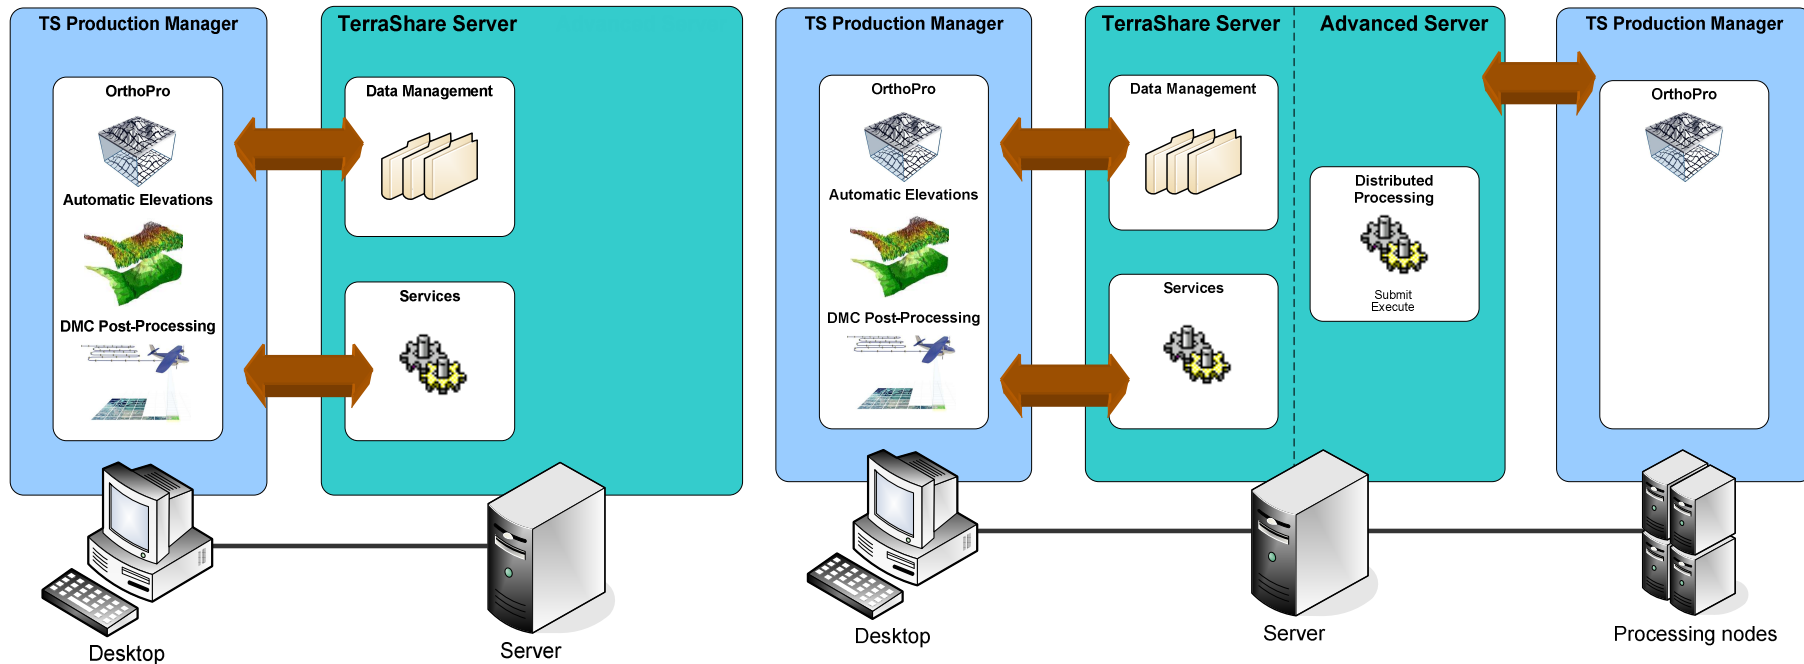

# Digital Photogrammetry Trend...

**From: Desktop Production**

**To: Distributed Production**

# Open Interoperability Trend...

- Any Sensor

- Any Process

- Any Workflow

- Any Data

- Anywhere

## Trends Affecting Earth Imaging... (1/2)

- Rapid production mandates ...
- More earth imaging sensors...
- In-flight calibrations...
- Global geospatial data sets...
- Photogrammetry integrated within GIS...
- Image & elevation data repositories...
- 3D Visualization...

## Trends Affecting Earth Imaging... (2/2)

- Image analysis/change detection...
- Automated feature extraction (again)...
- Spatially enabled enterprises...
  - Distributed processing
  - Seamless spatial computing
- Standards and interoperability...
- Web services...

# Project Duration for Statewide Mapping

- **Ground surveys (and the first set of nationwide 1:50,000 USGS quadrangle maps)**

**100 years**

- **Aerial Surveys (and the completed set of USGS DOQQs)**

**10 years**

- **Satellite imagery**

**1 year**

- **Unmanned Aerial Vehicles (UAVs)**

**1 day**

## Project Management

ISPM

ImageStation Photogrammetric Manager

## Orientation/Triangulation

ISMS

ImageStation Model Setup

ISDM

ImageStation Digital Mensuration + Satellite sensors

ISAT

ImageStation Automatic Triangulation

## Stereo 3D Feature Capture

ISFC-M

ImageStation Feature Capture - MicroStation

ISFC-G

ImageStation Feature Capture – GeoMedia

ISSD

ImageStation StereoDisplay

## DTM Collection & Edit

ISAE

ImageStation Automatic Elevations

ISDC

ImageStation DTM Collection

ISSD

ImageStation StereoDisplay

## Orthophoto Production

ISOP

ImageStation OrthoPro

ISBR

ImageStation Base Rectifier

**TerraShare**

# Our Response today (1/2)...

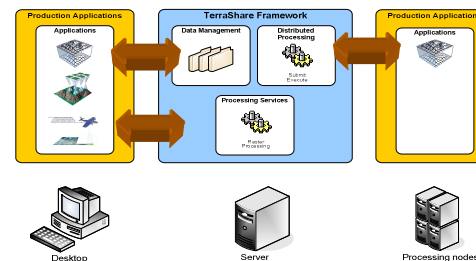

- Aerotriangulation enhancements

**PRODUCTIVITY**  
**265 Times Faster!**

- Distributed processing

- Unique TerraShare image & elevation management

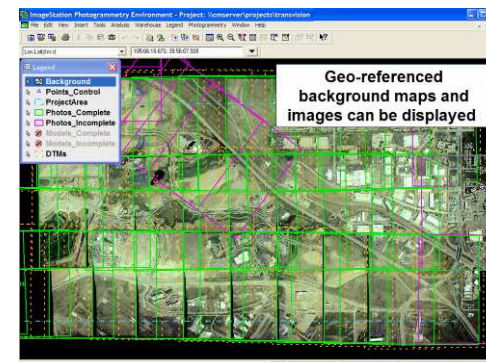

# Our Response today (2/2)

- Automated DEM Generation & Editing
- Smart seamlines
- New production management tools

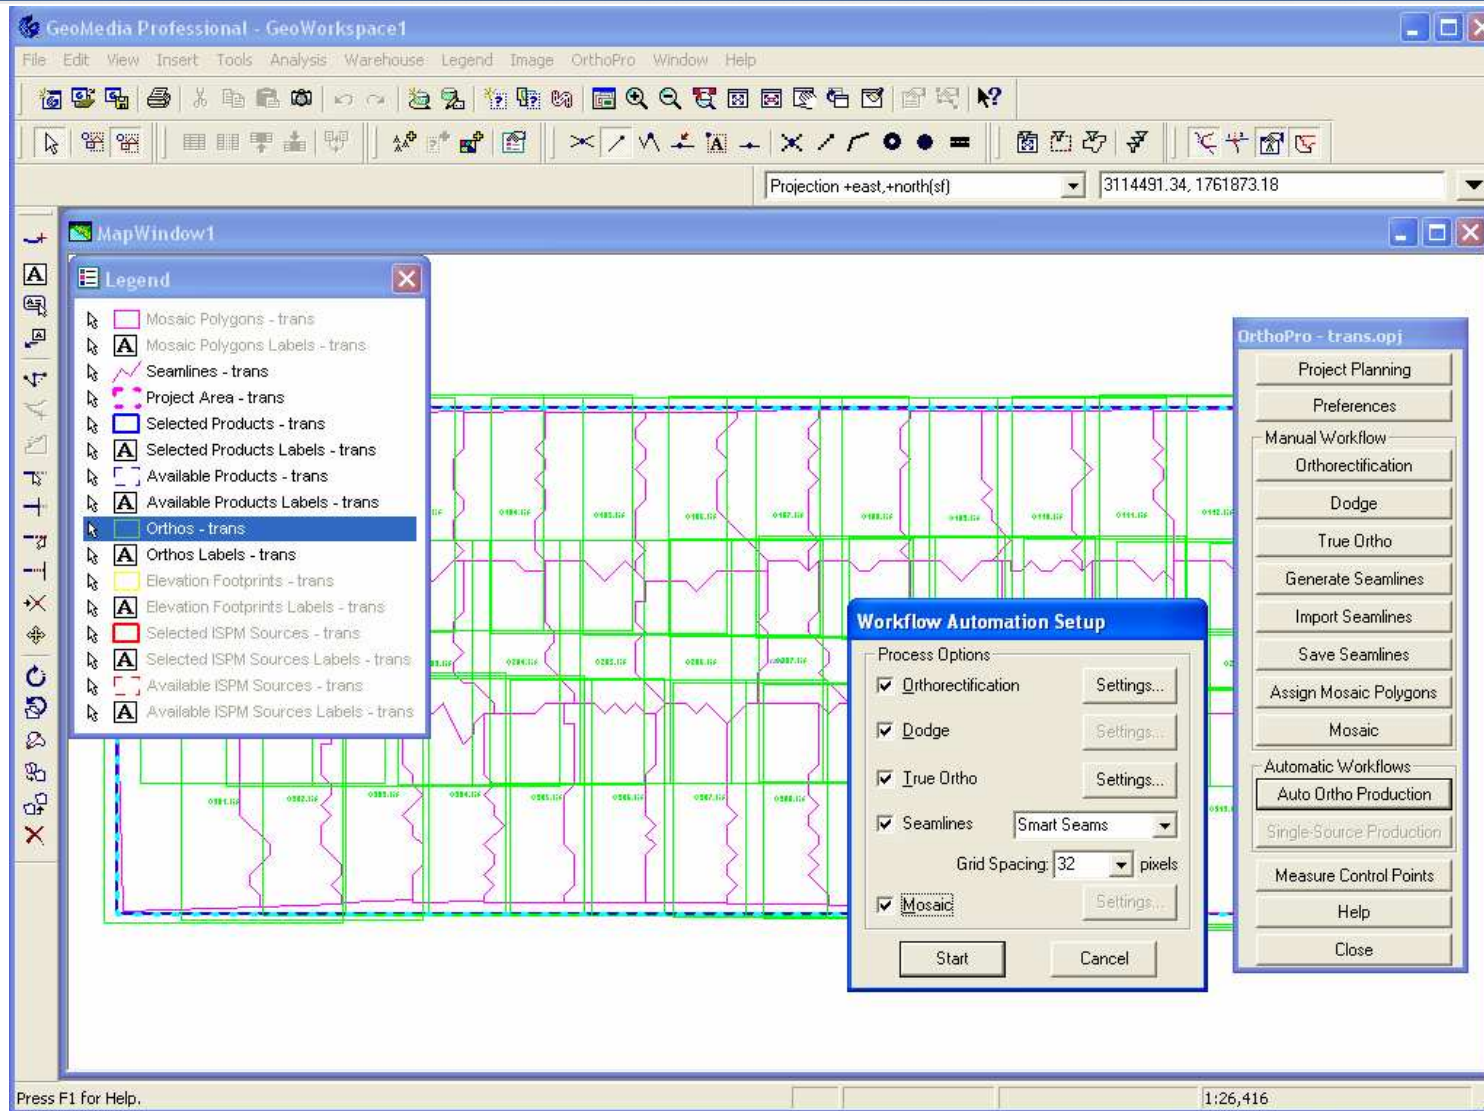

# Enterprise Exploitation

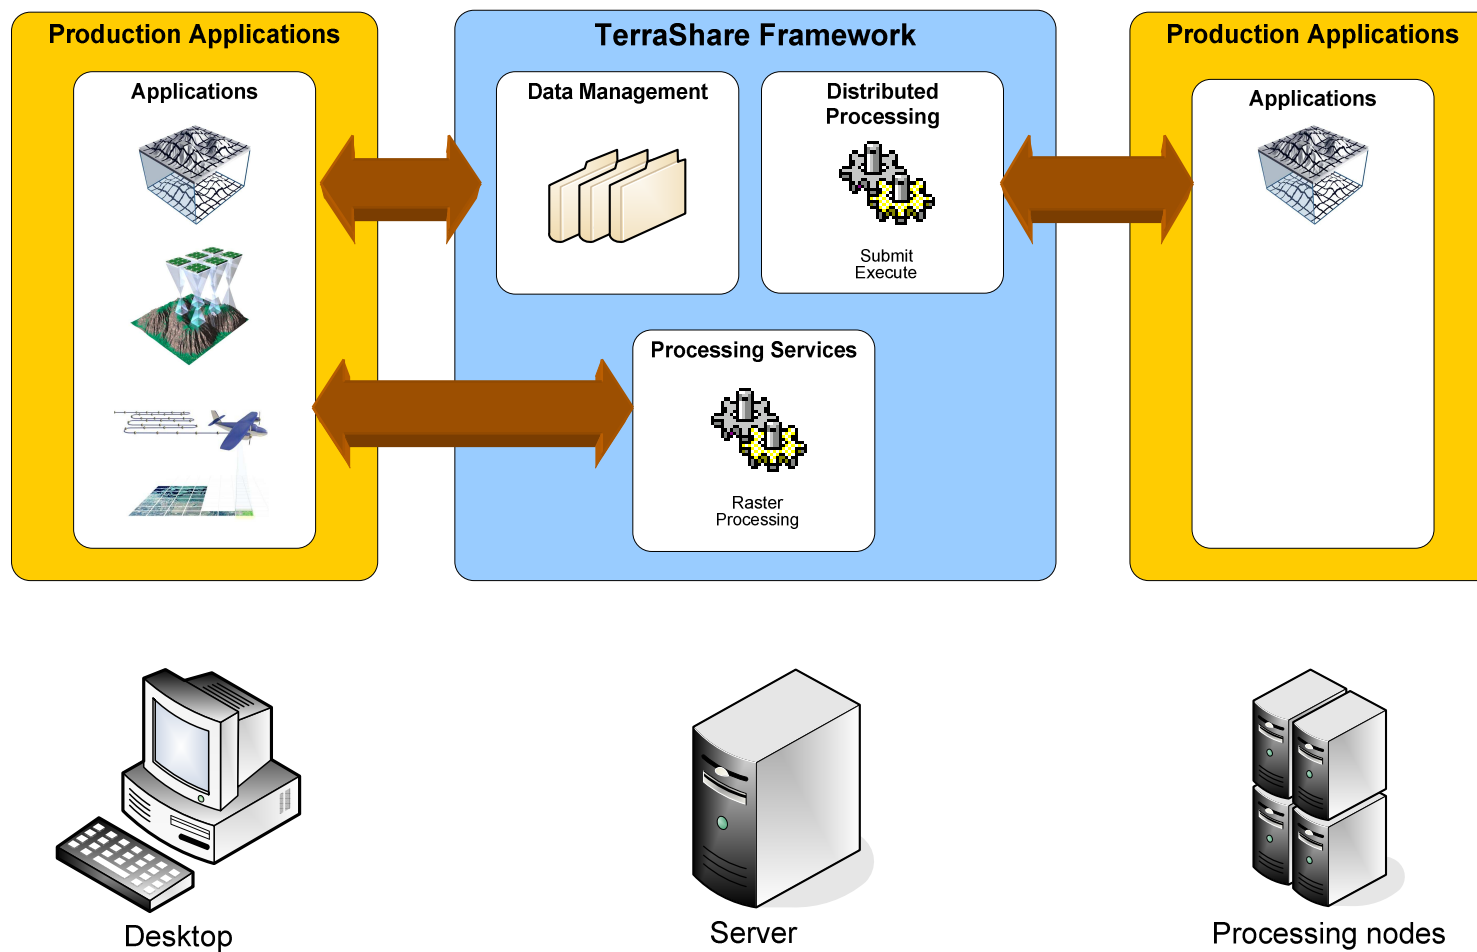

- One-button Orthorectification and Mosaicking
- Distributed Processing for Orthorectification/Mosaicking
- Distributed Processing for DMC Post-processing
- Consistent/Easy-to-Use User Interface
- Customizable Workflow
- Production Tracking

# One-button Rectification & Mosaicking

# OrthoPro Distributed Processing (DP)

# Performance of DP

- Comparison of the rectify process in a test project of 819 images, 294 DTMs

Note, Poor server and network performance may affect DP performance

# DMC, Digital Mapping Camera

**Image size 13.5k x 7.5k pixels**  
**Panchromatic and Multispectral**  
**12 Bit radiometric resolution**  
**864 Gigabytes of data storage**

**See presentation by  
Hartmut Rosengarten**

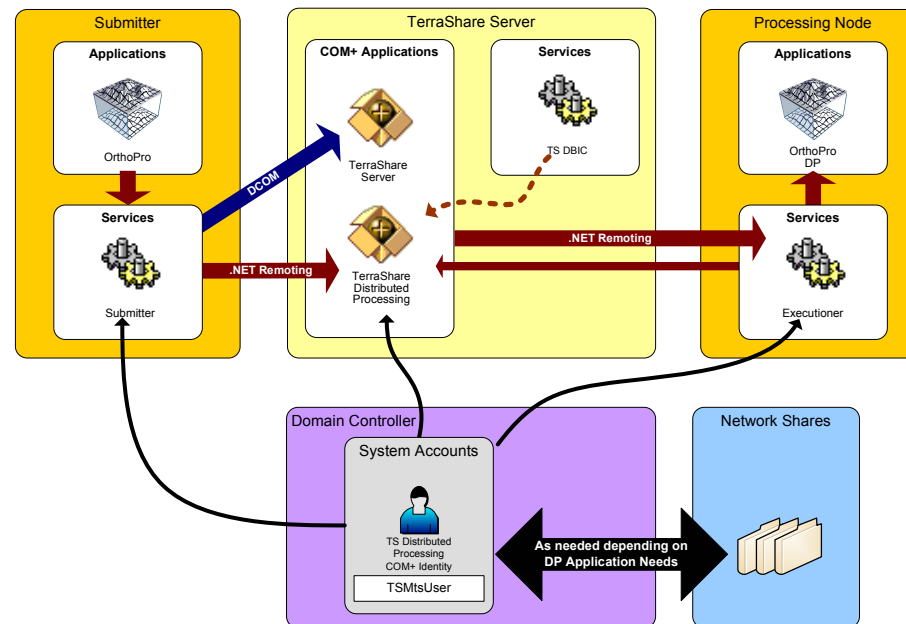

# Distributed Processing for DMC PPS

- Using TerraShare Advanced Server – Distributed Processing
- Reduce time taken for data to be available for exploitation
- Scaleable, the more processing nodes you have the faster it goes

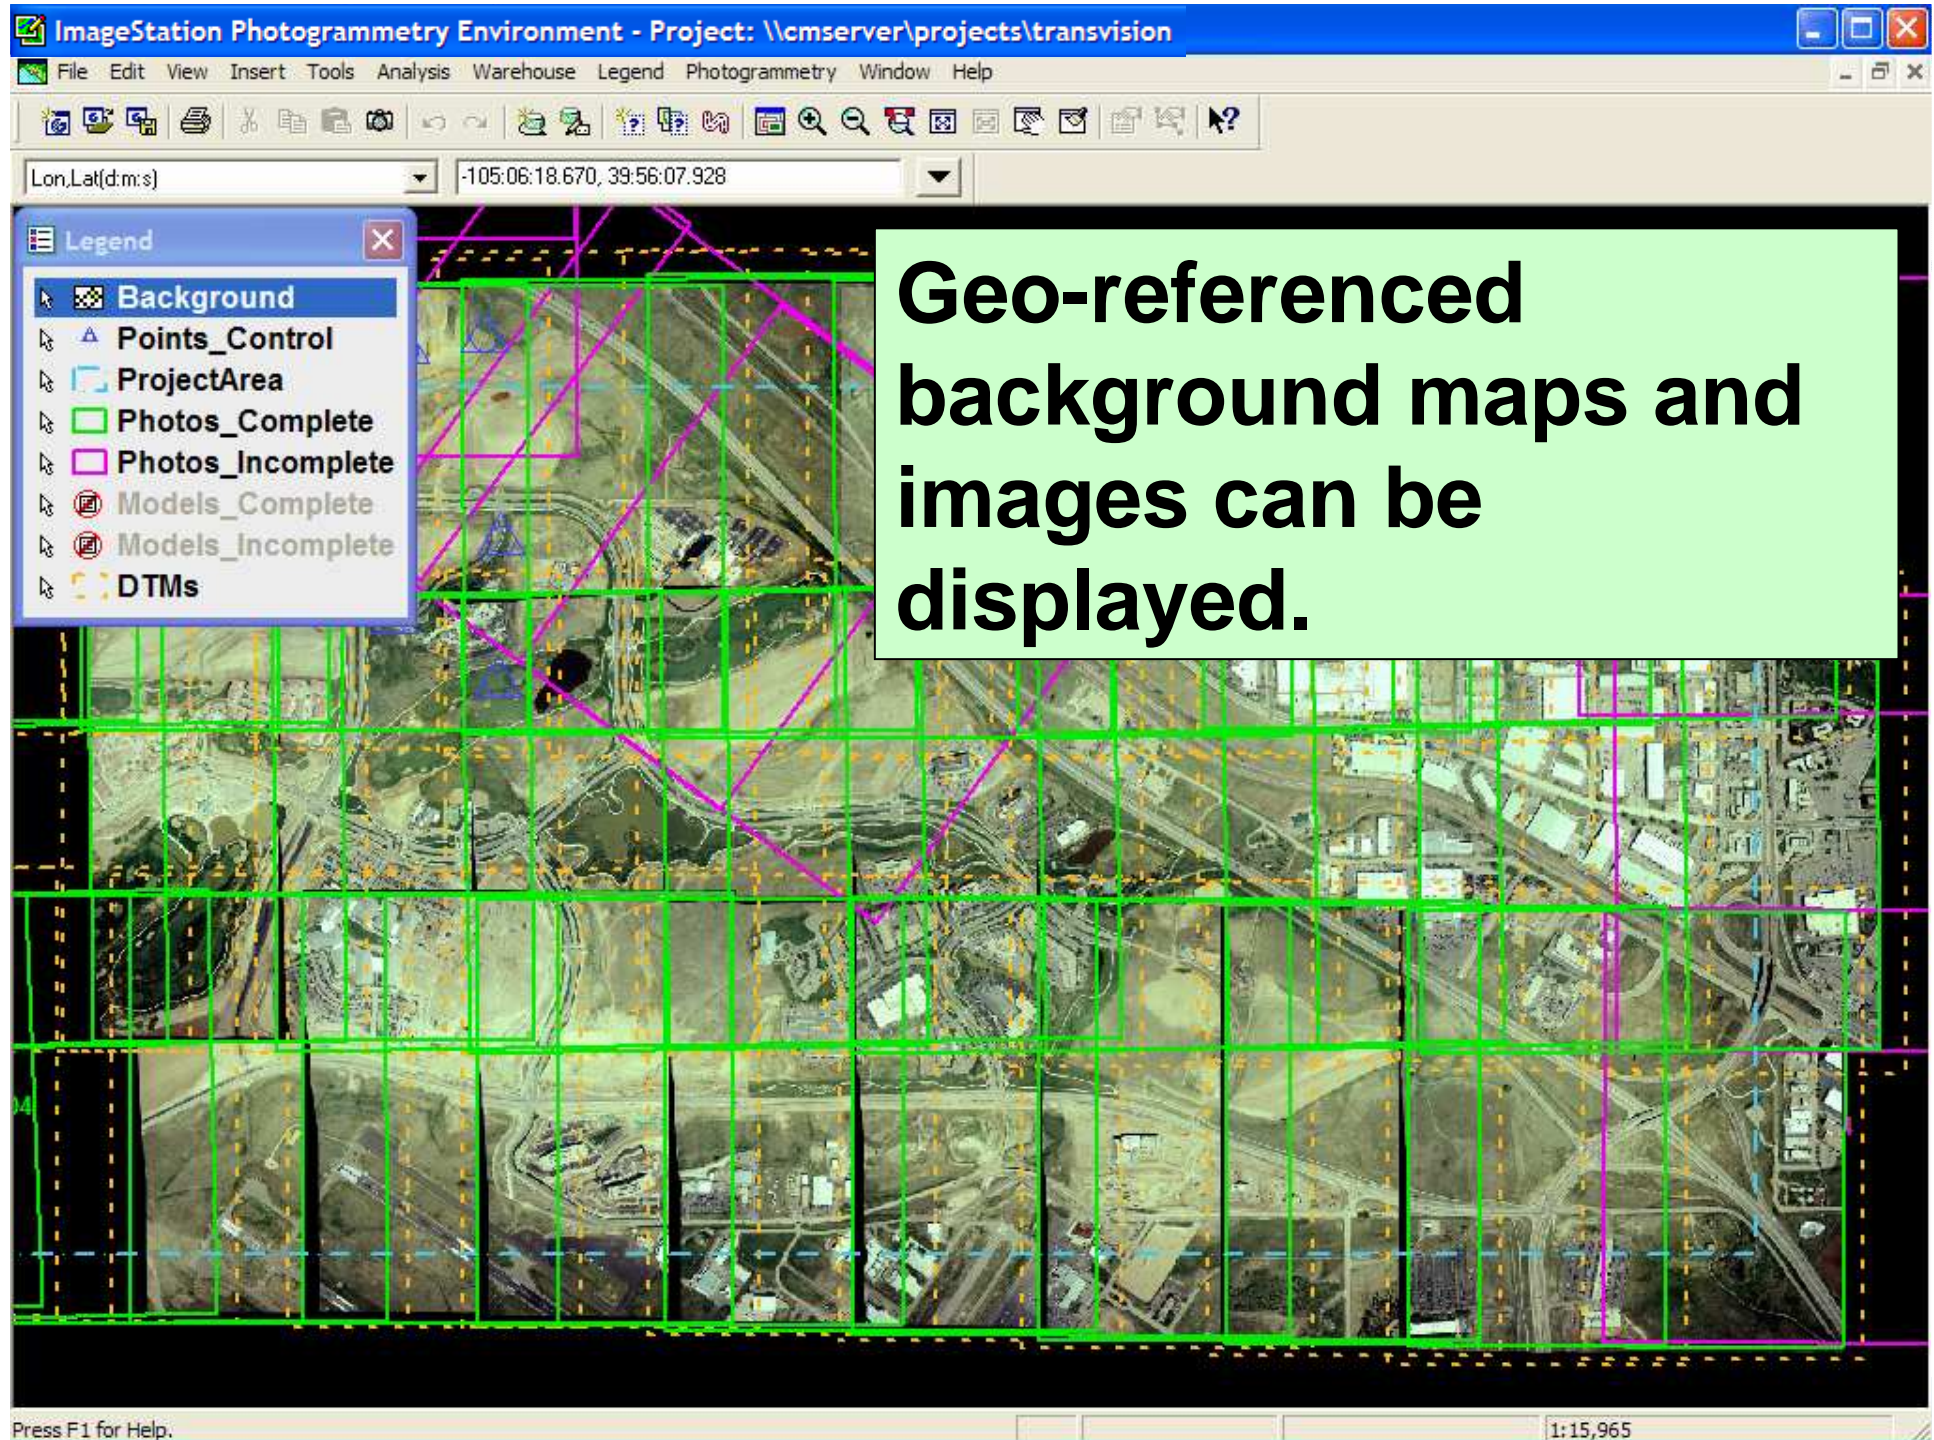

+

TerraShare 2.1  
Distributed Processing

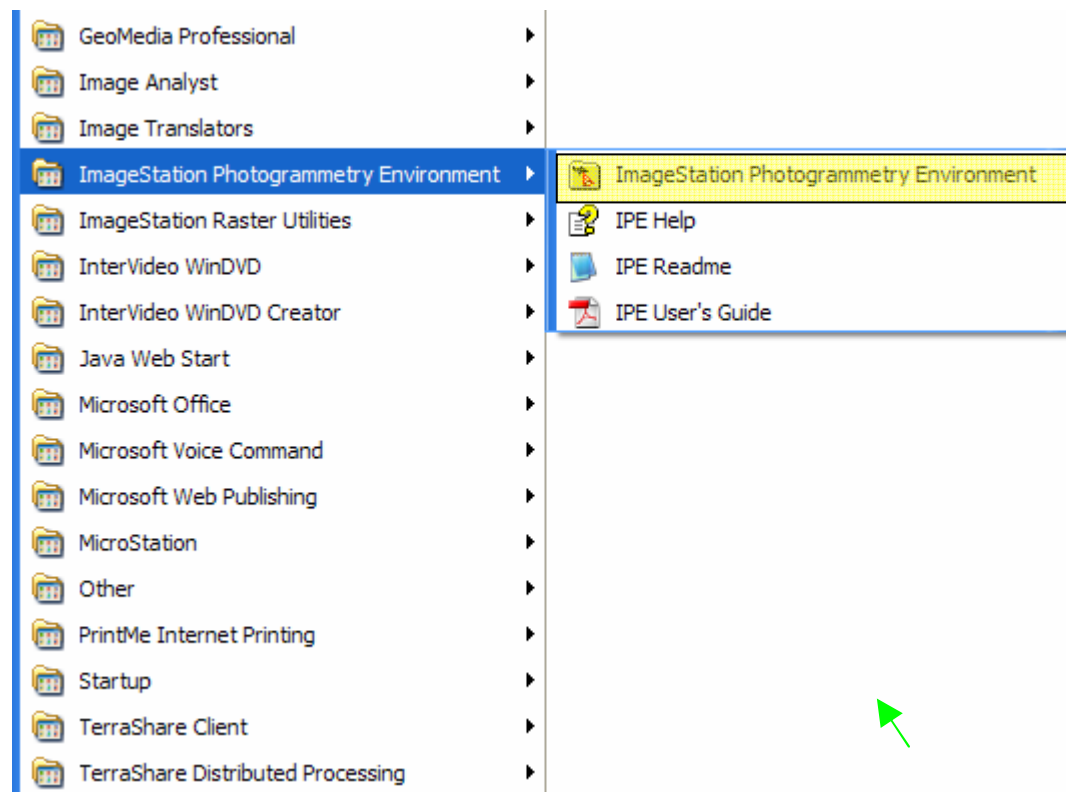

**See presentation by  
Christoph Dörstel**

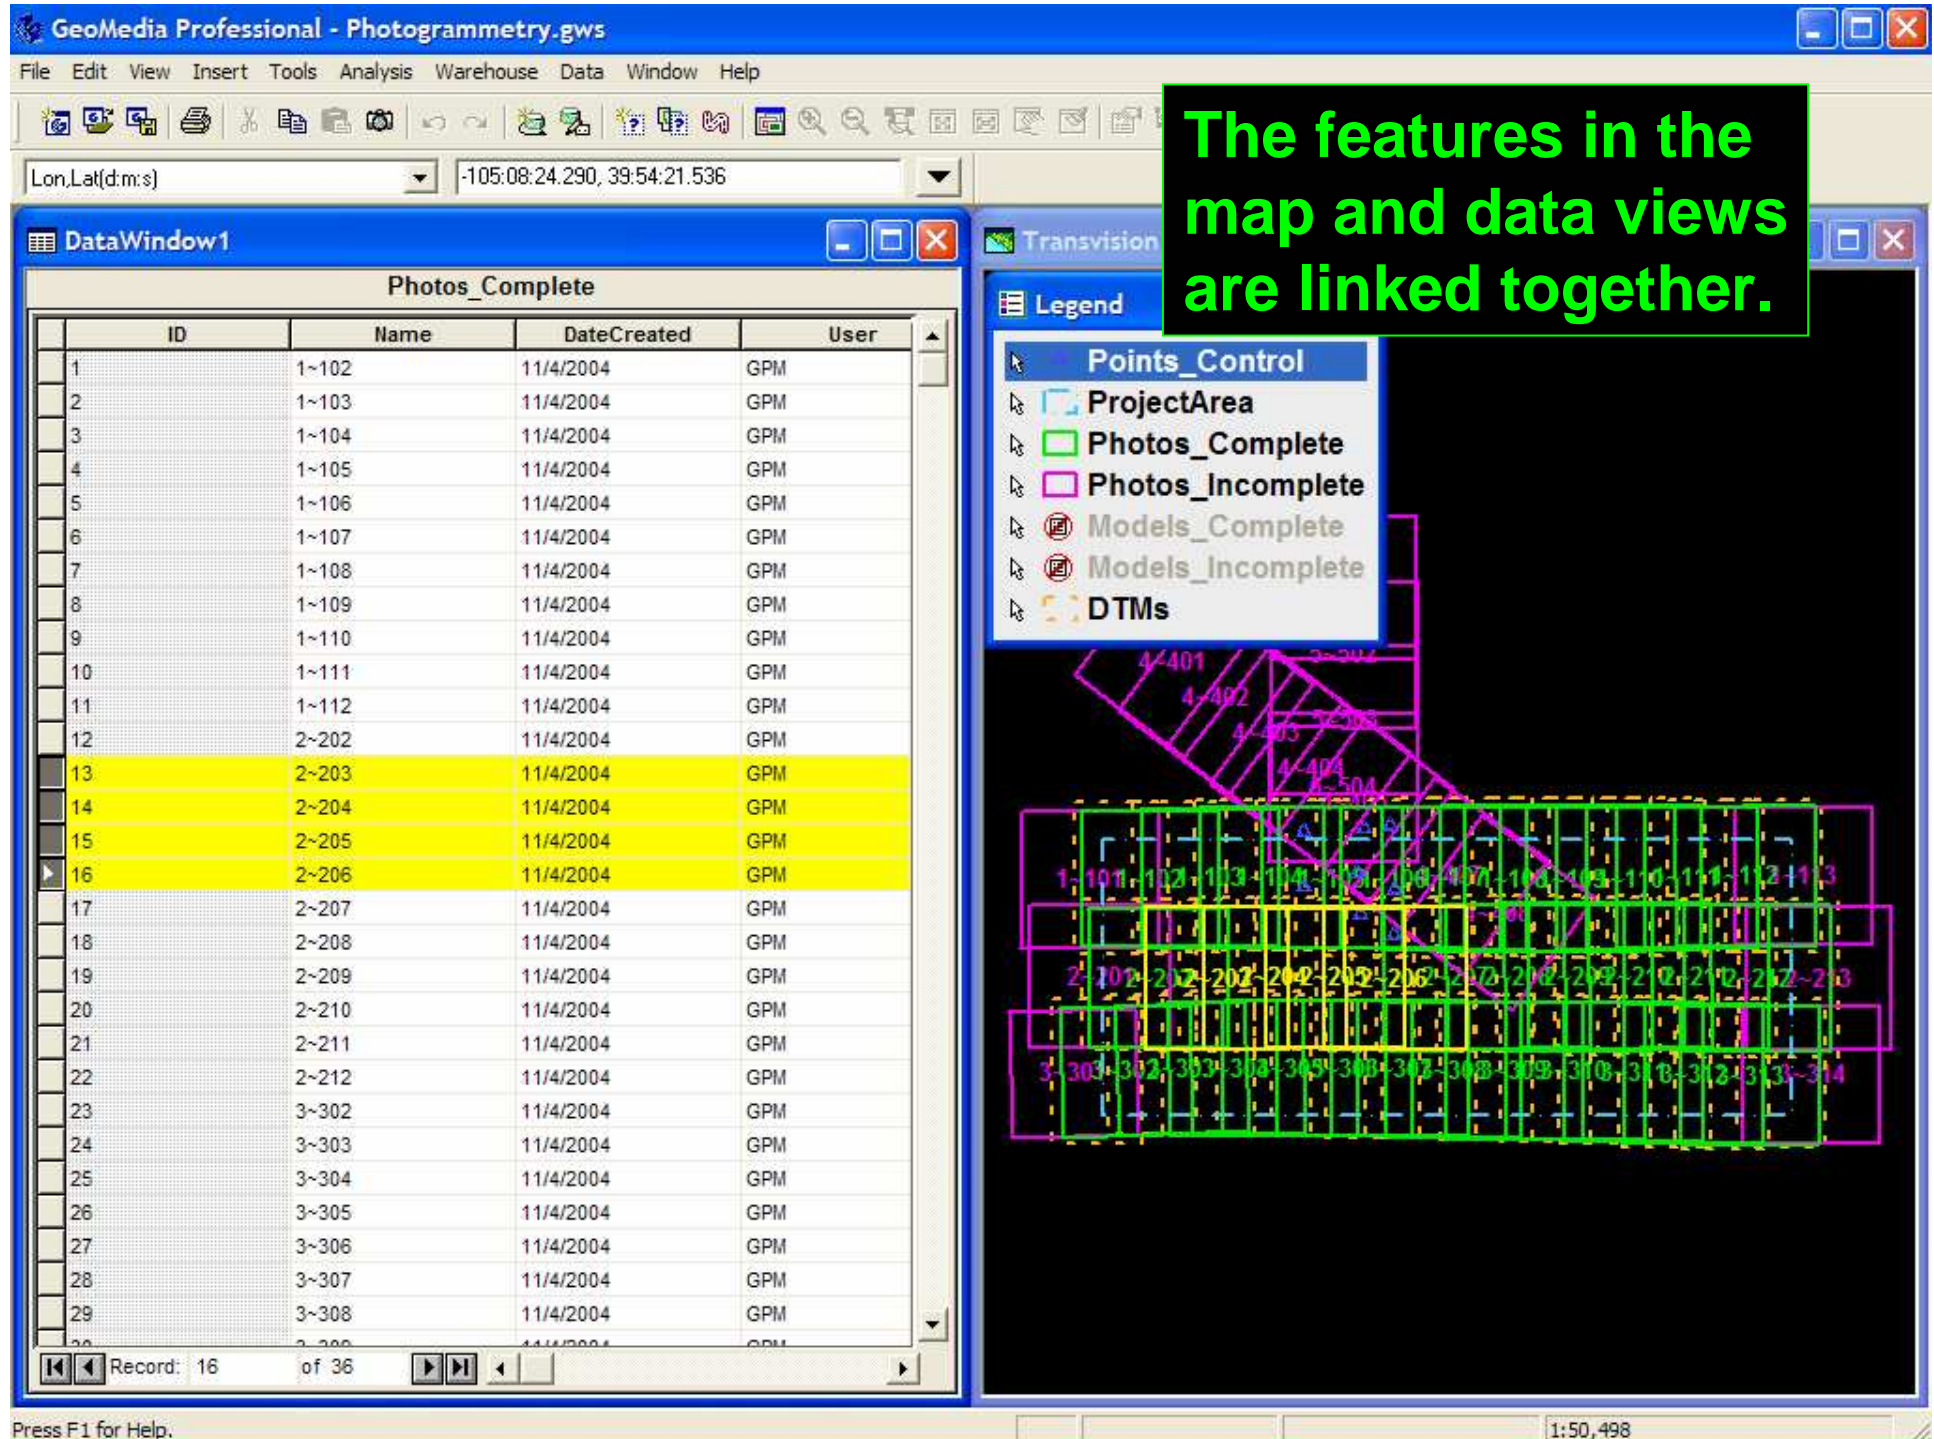

# ImageStation Photogrammetry Environment

Simplified,  
single entry point  
to create, view,  
and run a full  
Photogrammetric  
Workflow.

Regional Operations  
Center

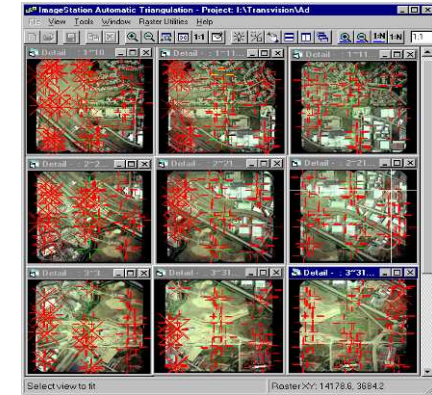

Aerial Imagery

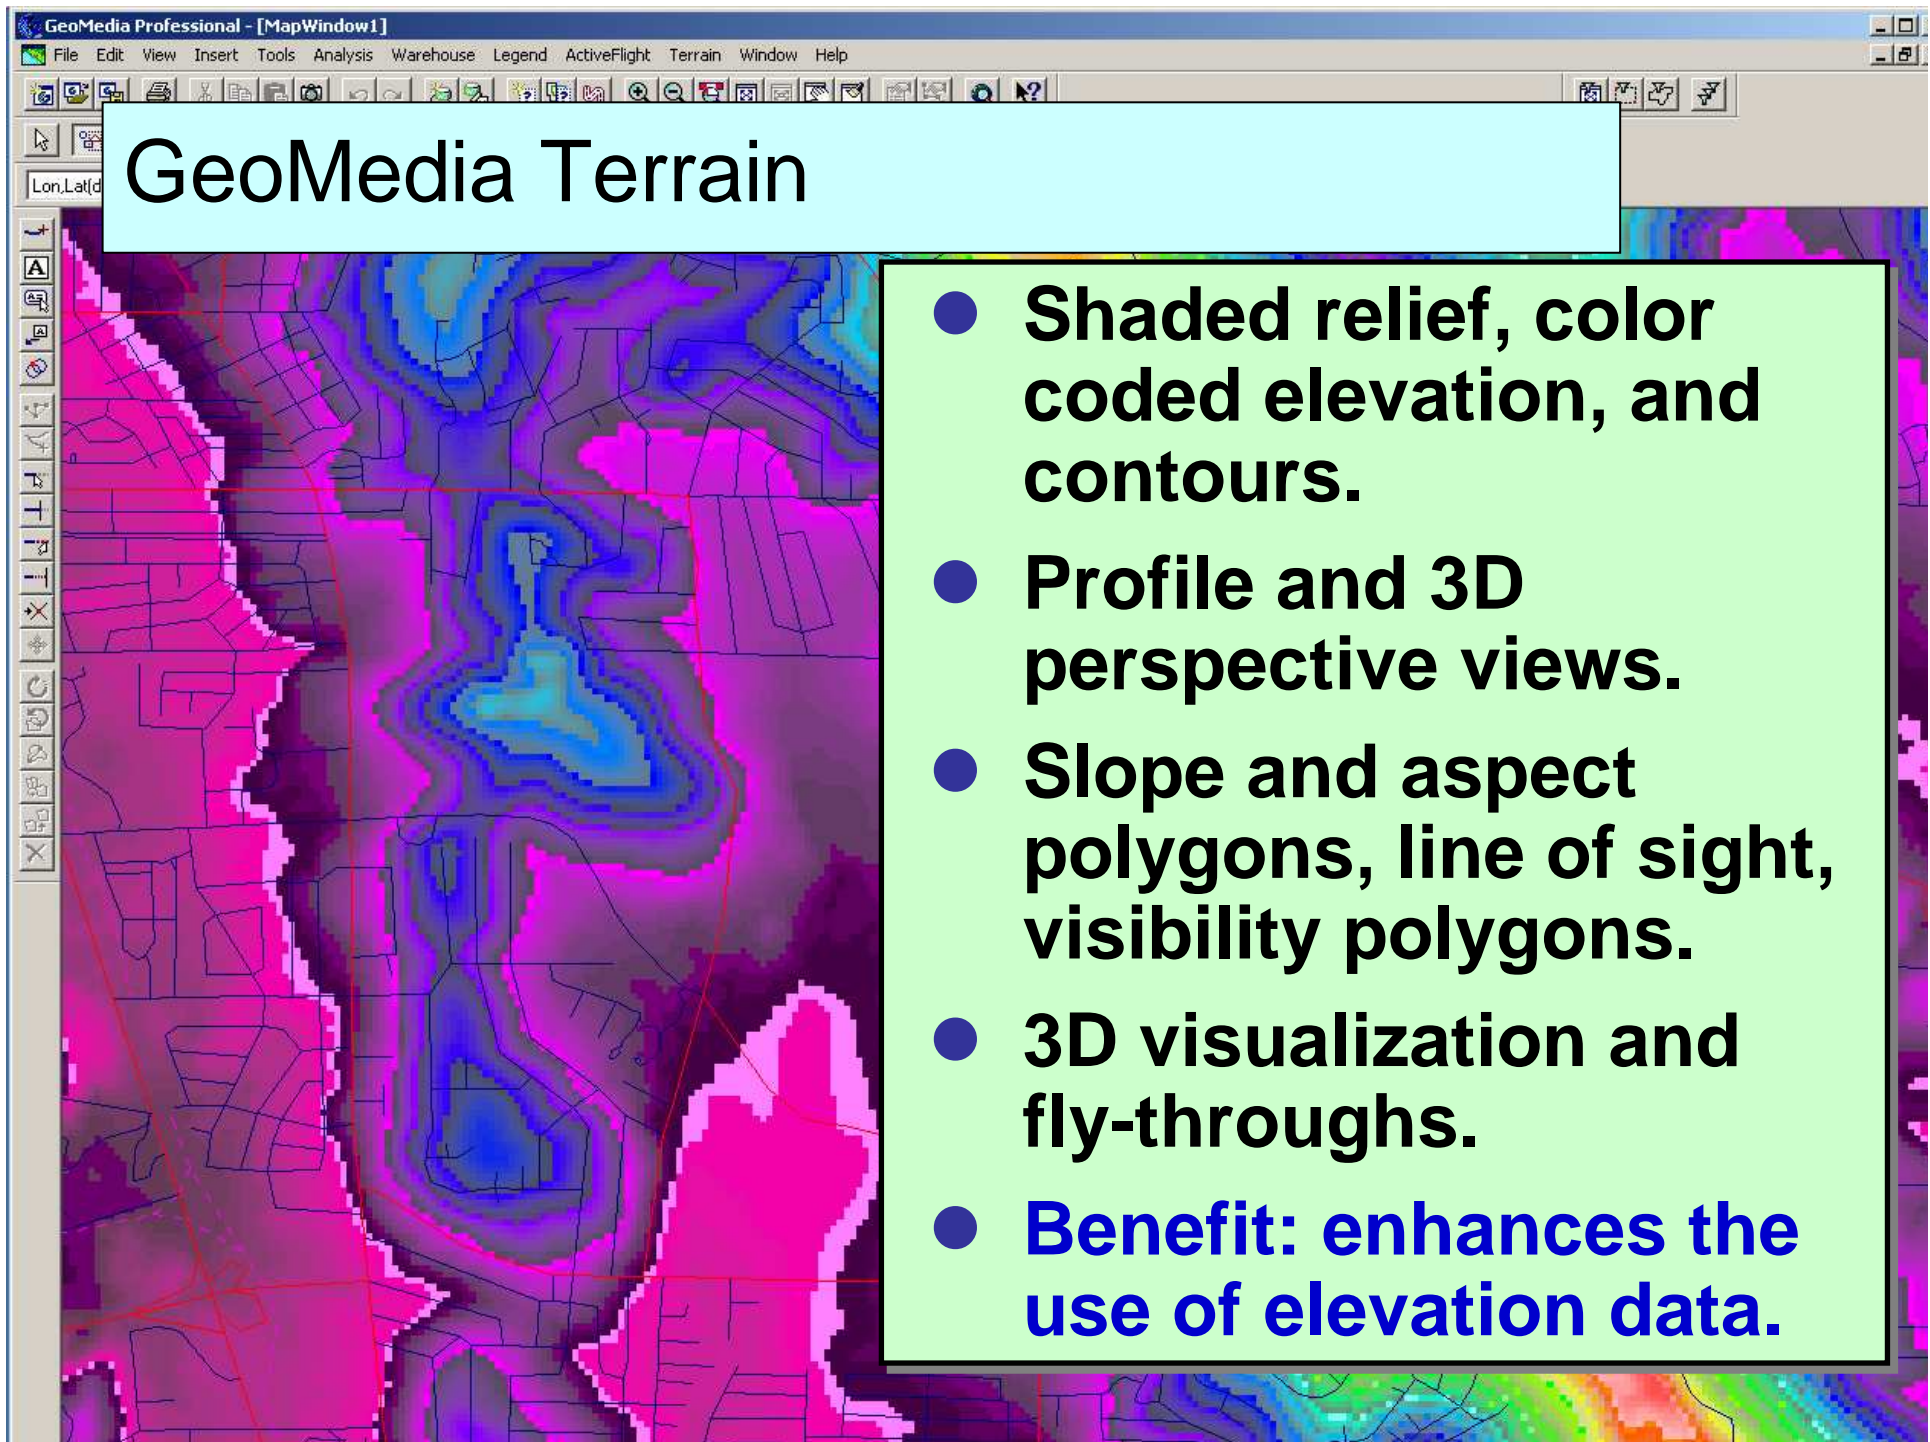

# Our Response to More Sensors

- Support for more airborne & satellite sensor triangulations
- Improve processing tools for elevation data
- Enhancements to GeoMedia Terrain

# In-flight Camera Calibrations

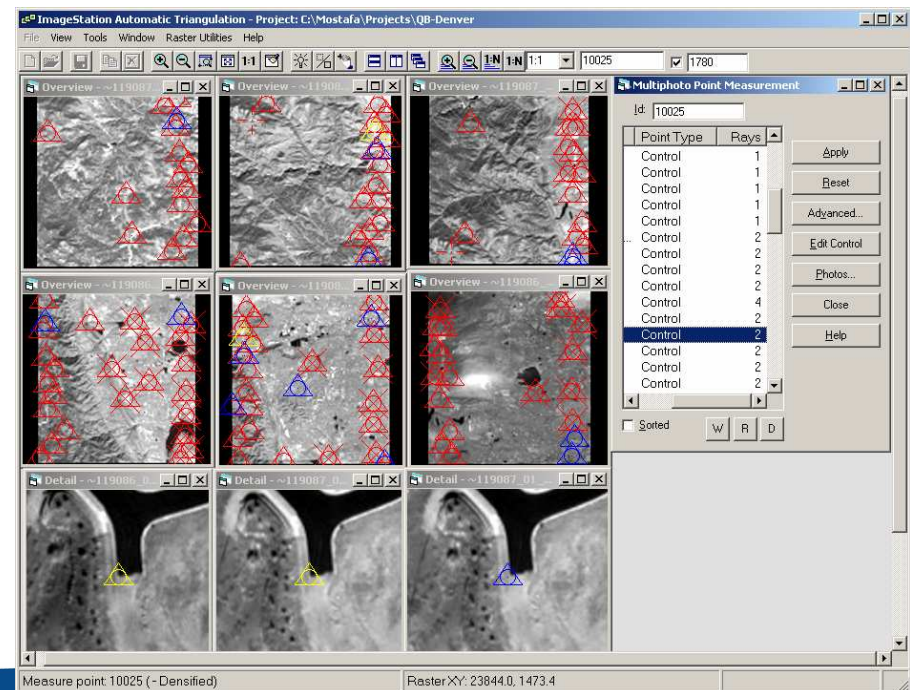

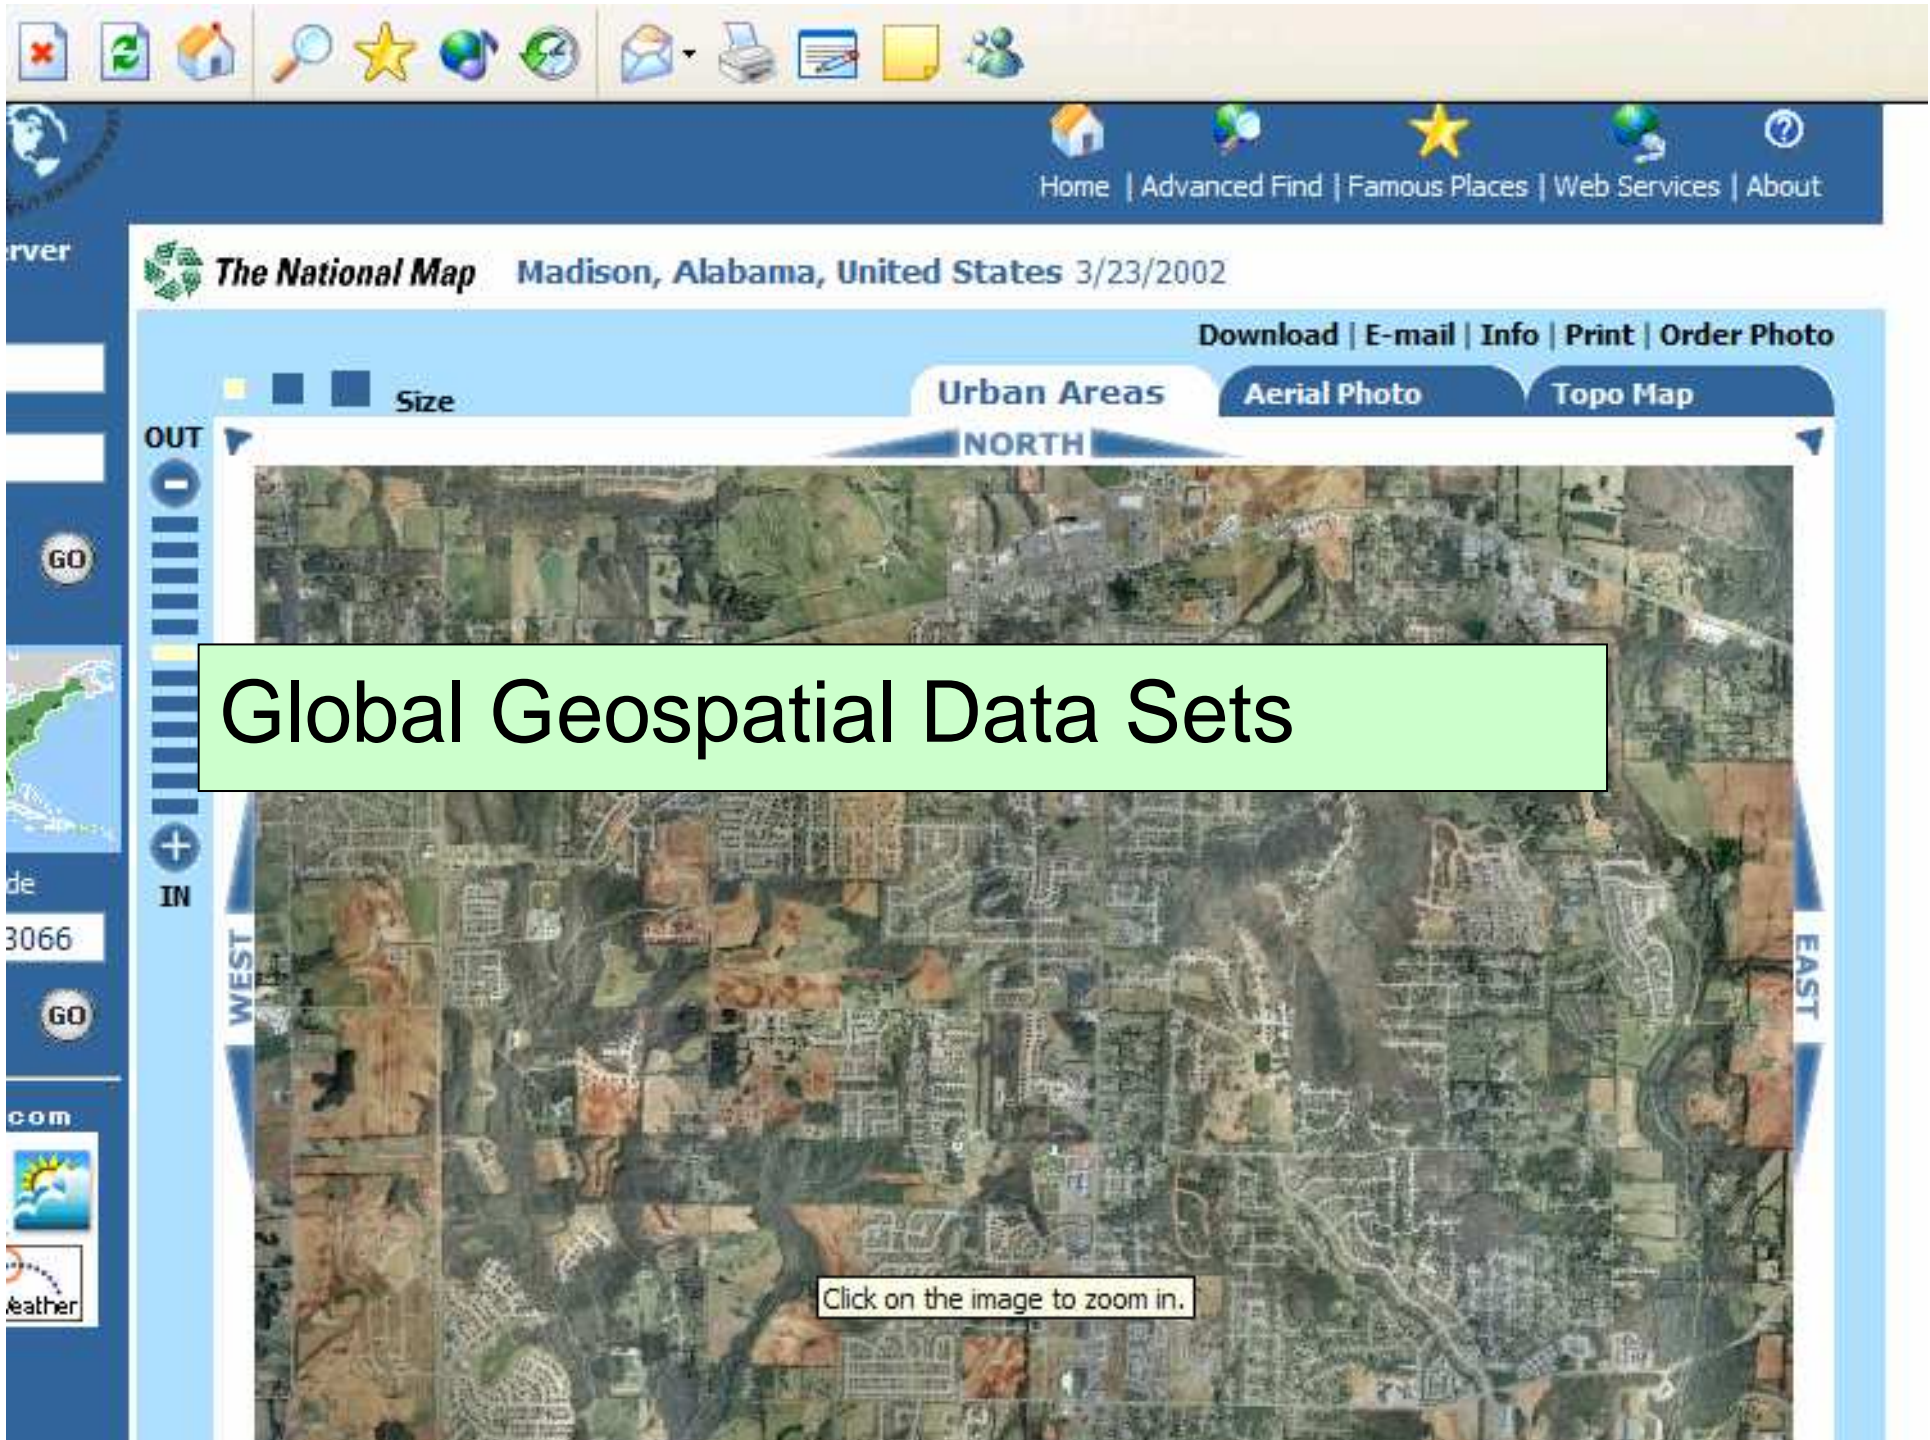

# In-flight Camera Calibrations

## Our response

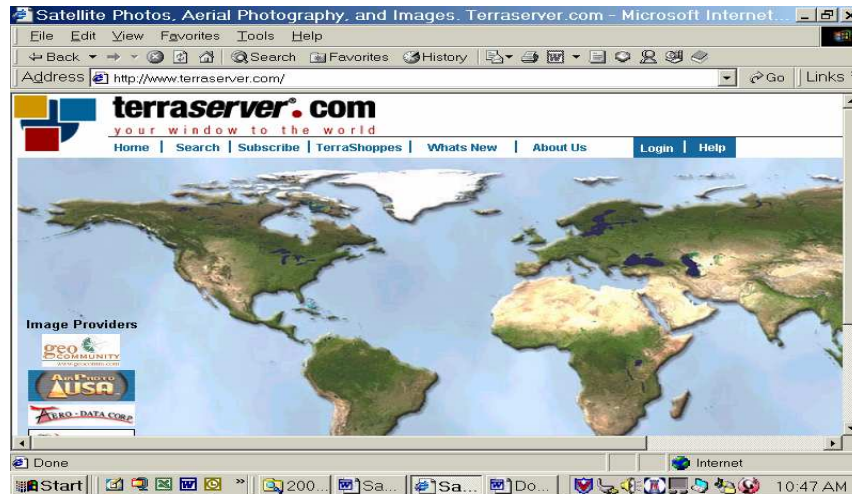

- Provide customers tools (ISAT) to do self calibrations
- Working with USGS to define in-flight calibration process and acceptance criteria

# Image Data Repositories.

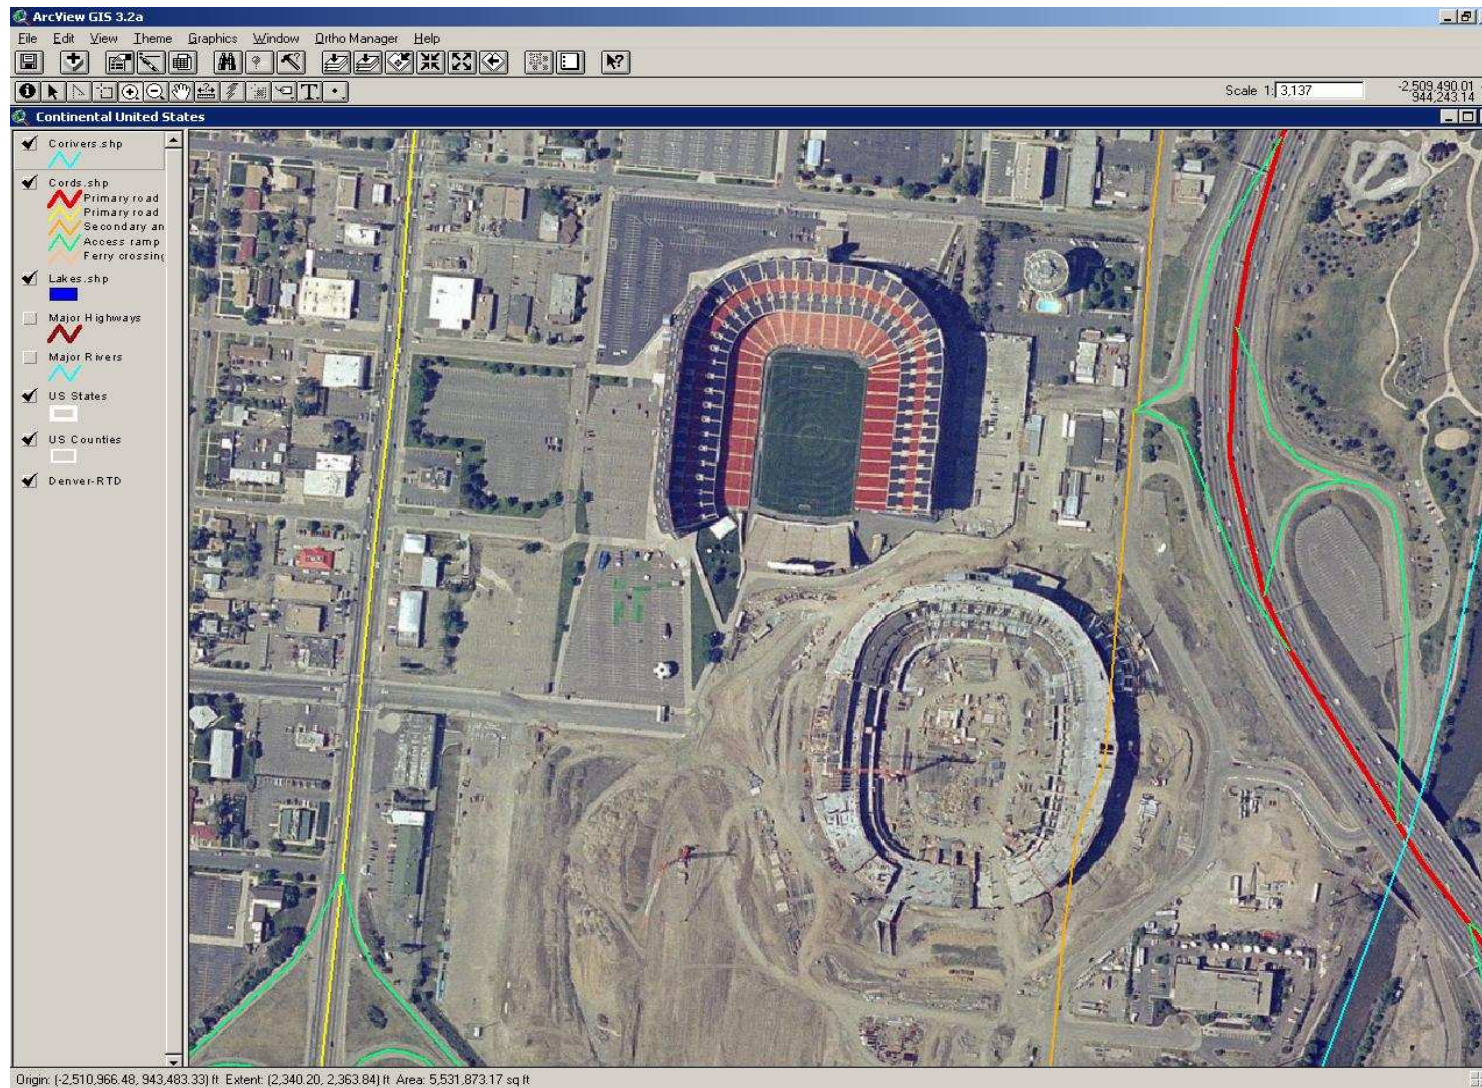

- Satellite Images.
- Aerial Imagery.
- LIDAR and Radar Images.
- Federal, State and Local data repositories.

- Open (metadata)
- Accessible (catalog)
- Served (web services)
- Licensed (in many cases, free)
- Standardized

# Our Response: TerraShare

# Image Analysis/Change Detection

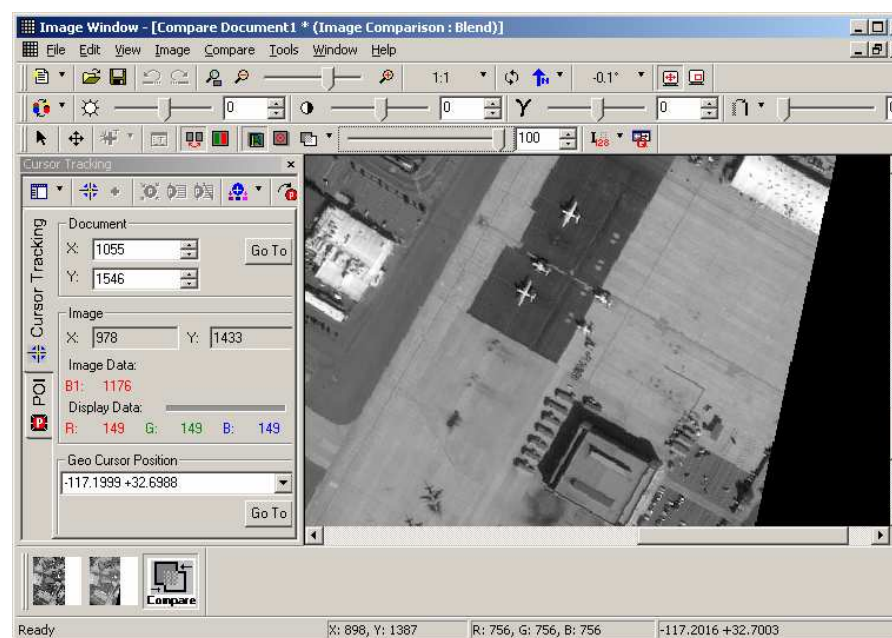

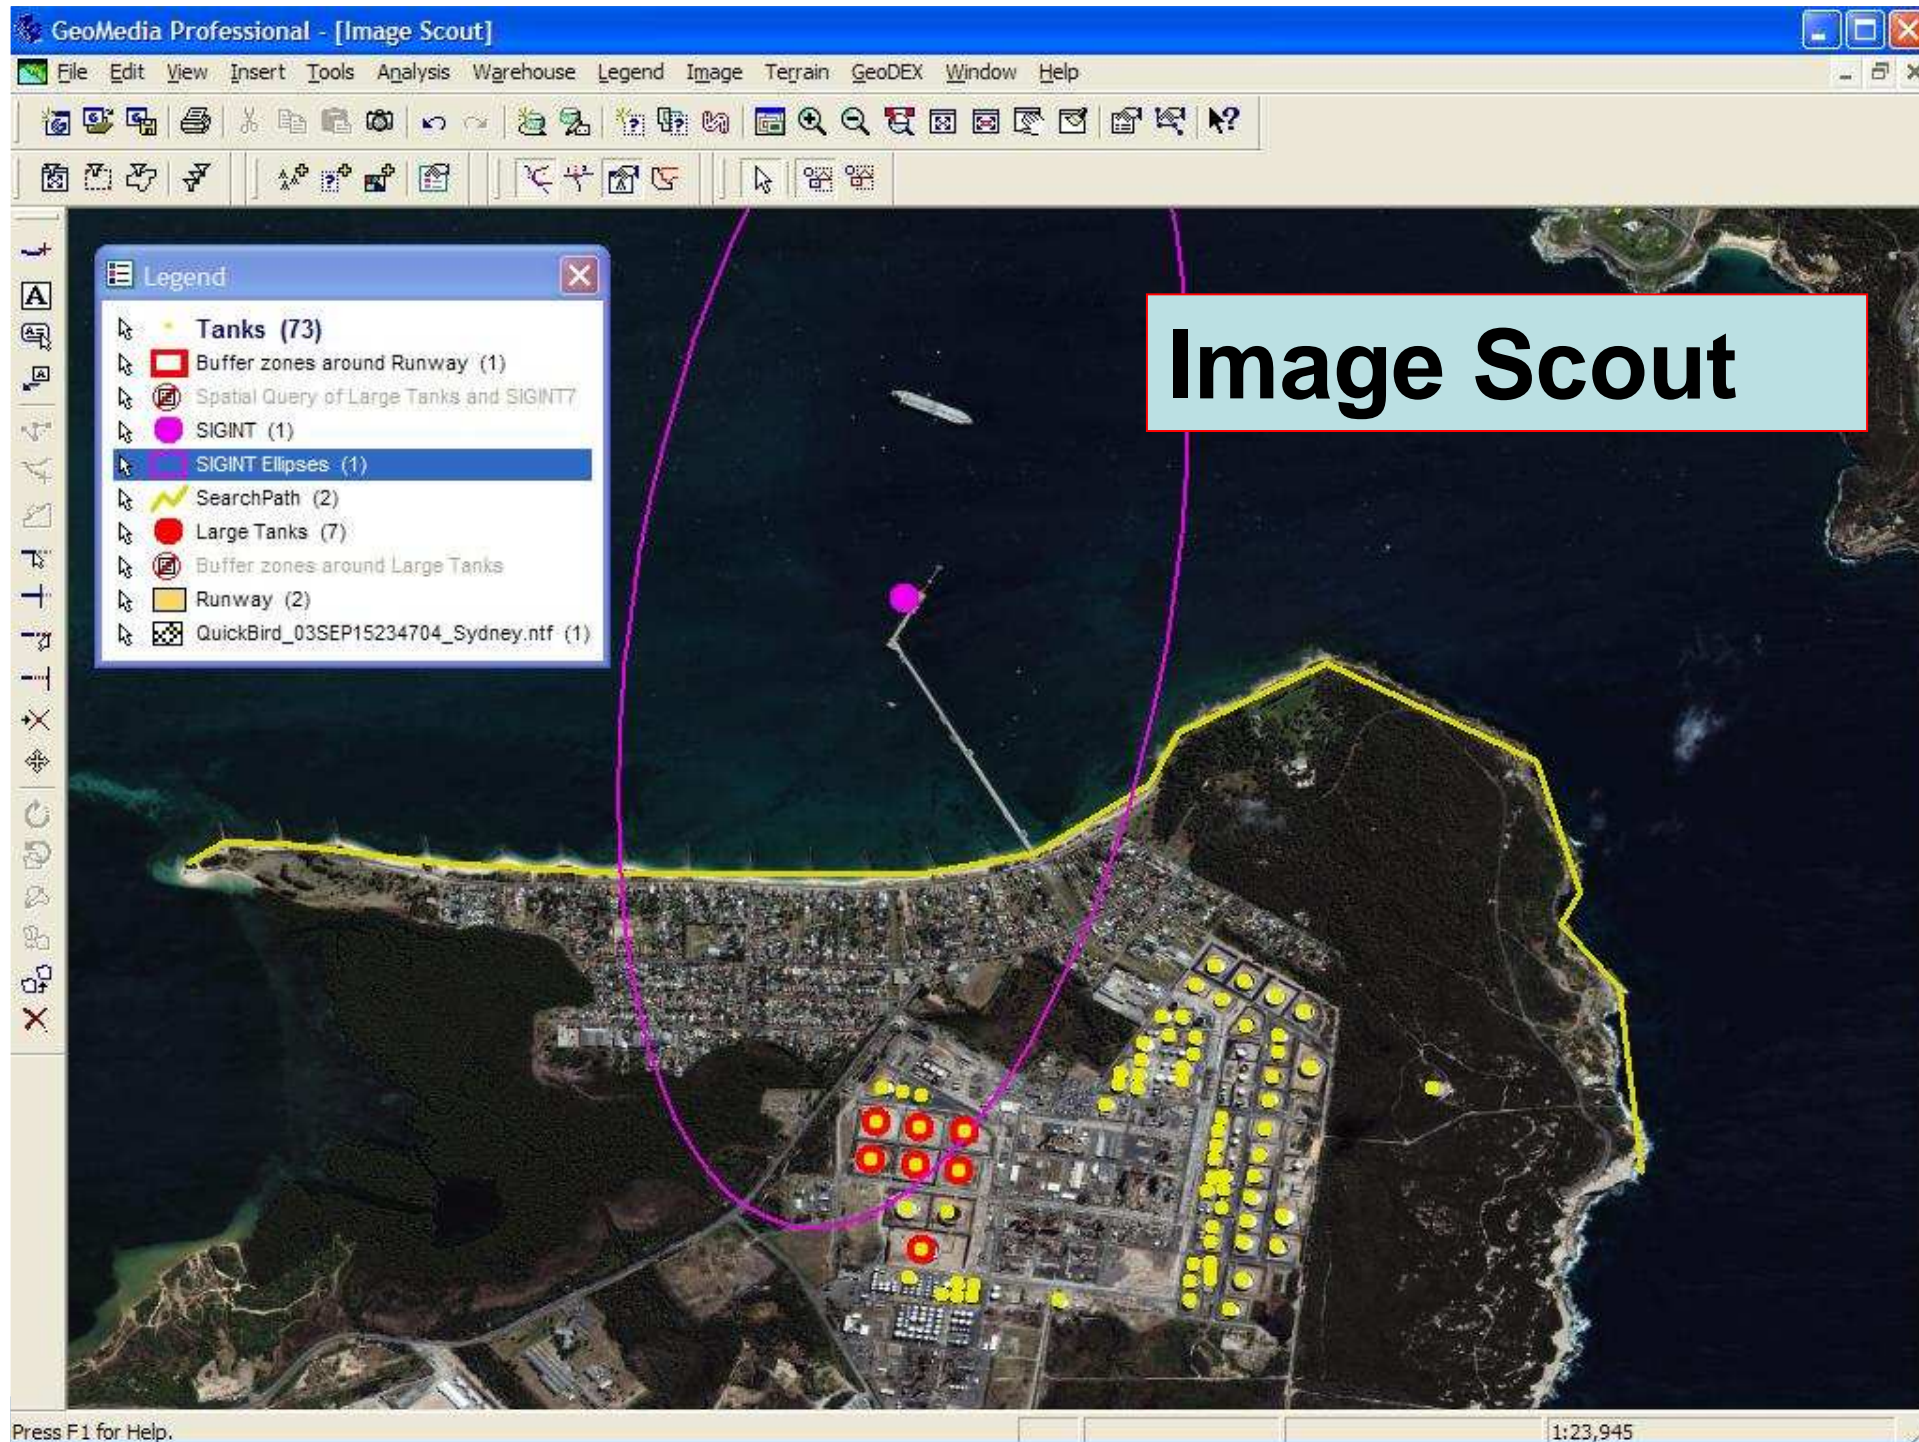

# Enhanced GeoMedia Imaging

- Advanced Image processing capabilities in optimized Image Window
- Image enhancement capabilities for precise information extraction
- Image comparison – change detection capabilities
- Automatic image roam for systematic search

## ***GeoMedia Image Light Table***

Coming in 2005:

# Feature Analyst for GeoMedia

1. Automated feature extraction
2. Multi-class features
3. 3-D feature extraction
4. Stereo extraction
5. Smart vector editing
6. Auto extraction of buildings, bare earth, and trees from DEMs
7. Change detection from multi-date images

Visual Learning Systems

## Enterprise Data Assets

# Spatially Enabled Enterprises...

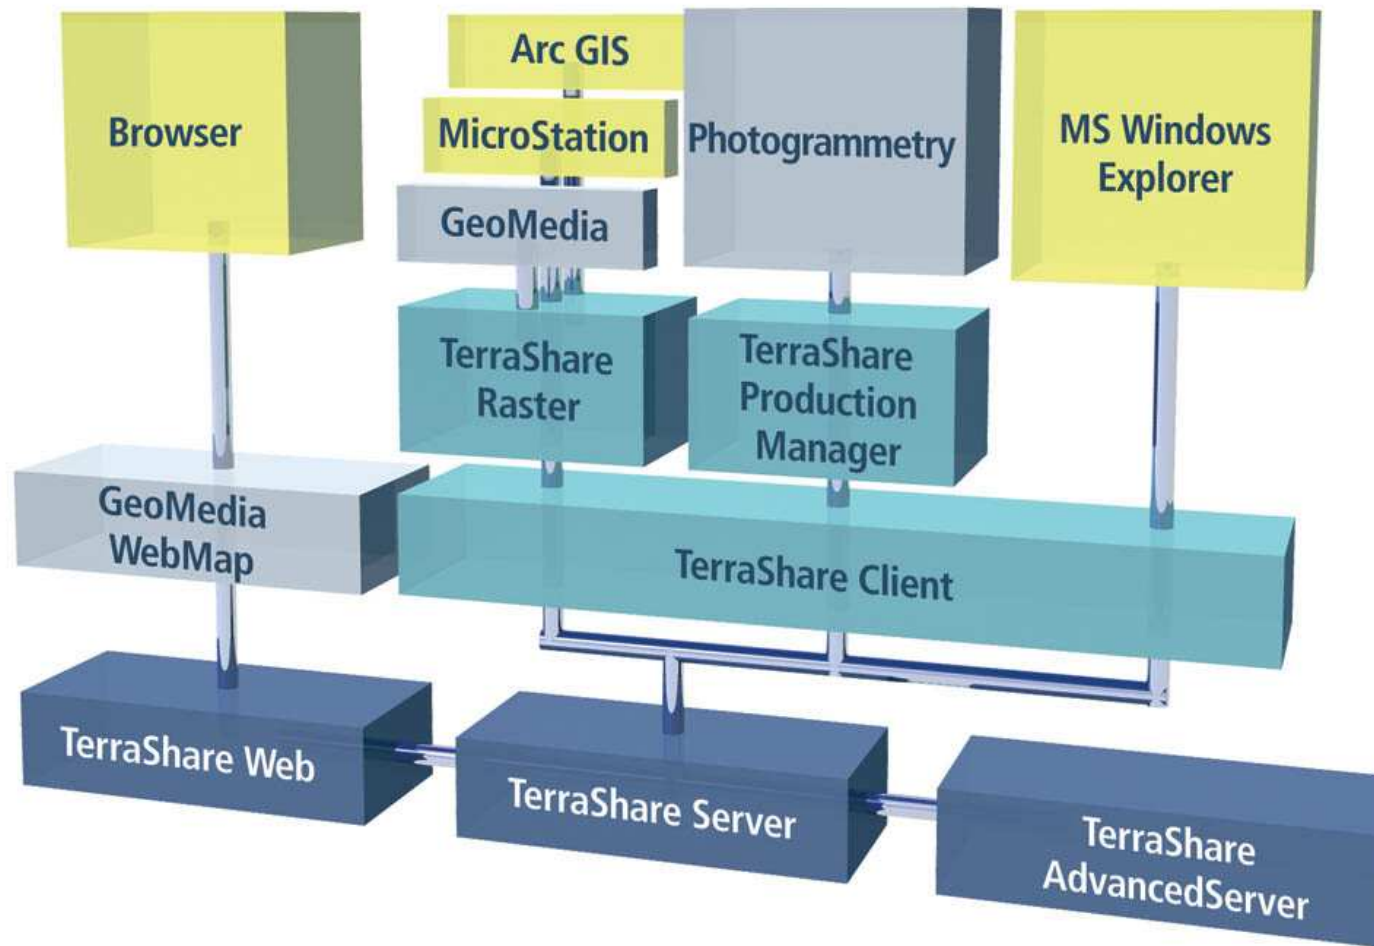

# Enterprise Geospatial Integration

1. Within corporate IT environment
2. Integrated with other applications
3. Using distributed processing
4. Includes standard development tools
5. Data shared in distributed environment
6. Managed from within a single, integrated environment

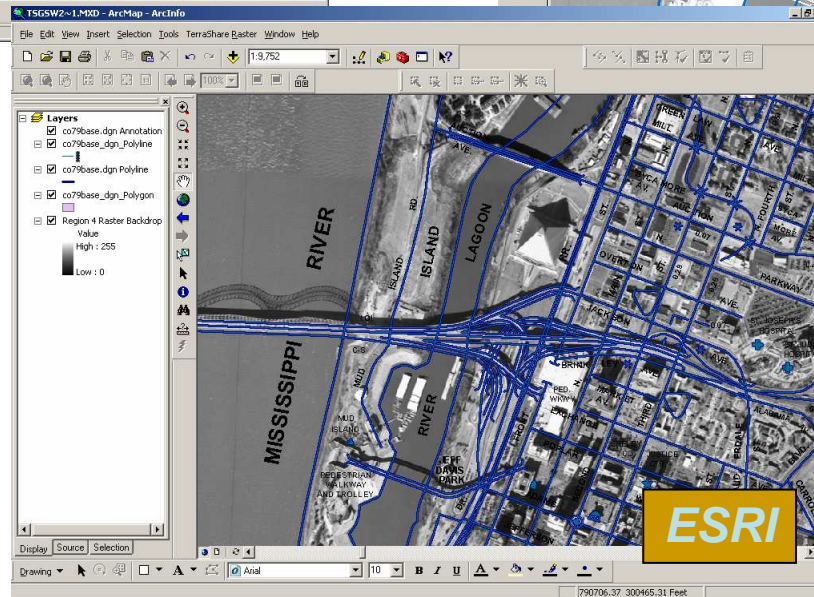

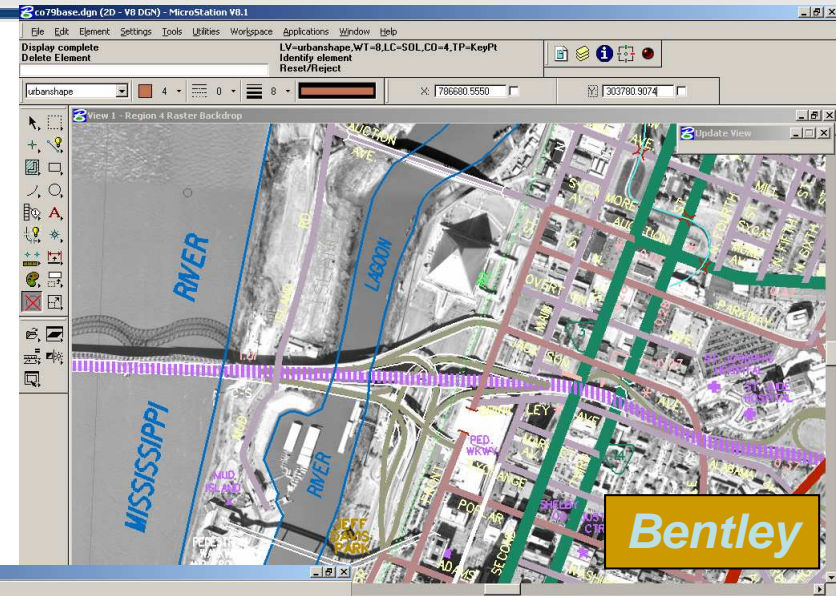

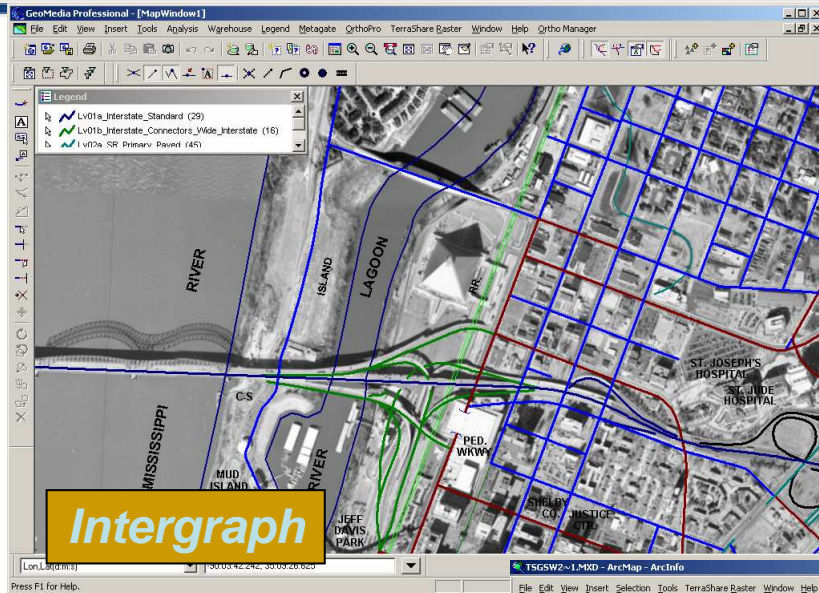

Our Response:  
**TerraShare Product Suite**

# Seamless Access on the Desktop

# A Look to the Future...

## From:

- Film processing.
- Serial Processing.
