ISPRS Workshop in conjunction with ICCV 2005

BenCOS
Towards Benchmarking Automated Calibration, Orientation and Surface Reconstruction from Images

Beijing, China
October 15, 2005

Editors
O. Hellwich, I. Niini, C. Ressl, V. Rodehorst, D. Scharstein, P. Sturm

Organisers
ISPRS WG III/1 - Automatic Calibration and Orientation of Optical Cameras
ISPRS WG III/2 - Surface Reconstruction
Workshop Organising Committee

Olaf Hellwich, Berlin University of Technology, Germany
Ilkka Niini, Oy Mapvision Ltd., Finland
Camillo Ressl, Vienna University of Technology, Austria
Daniel Scharstein, Middlebury College, USA
Peter Sturm, INRIA, France

Program Committee

Niclas Börlin, Sweden
Yuri Boykov, Canada

INTRODUCTION

The workshop Towards Benchmarking Automated Calibration, Orientation and Surface Reconstruction from Images (BenCOS) of the International Society for Photogrammetry and Remote Sensing (ISPRS) in conjunction with the 10th IEEE International Conference on Computer Vision (ICCV 2005) focuses on automatic methods for surface reconstruction from images, multi-view stereo, camera (self-) calibration, motion estimation and related topics.

One major aim of the new commission III on Photogrammetric Computer Vision and Image Analysis is to bring together researchers from the related fields, and let them benefit from mutual experience. The working groups Automatic Calibration and Orientation of Optical Cameras and Surface Reconstruction are co-chaired by researchers from the computer vision and photogrammetry communities.

Apart from being a forum for discussing new scientific results, the major goal of these working groups is to establish true benchmarks for the performance evaluation of proposed methods. We believe this is a highly important aspect of scientific research; it allows an objective comparison of different approaches, catalyzes new developments, and eases the access of potential commercial users to these research areas and communities. The motivation for this workshop is thus threefold:

- communication of new scientific results in the related areas,
- bringing together researchers from different communities, and
- working towards the definition of benchmarks.

We received 17 contributions of which we were able to accept 10 as oral presentations. Reviewing was carried out in a double-blind process by leading international researchers of the computer vision and photogrammetry areas. Each full paper has been reviewed by 3 members of the program committee.

We hope that all workshop participants will leave Beijing with the most rewarding memories in the scientific, technical and social aspects, and that those unable to attend will find the proceedings a valuable source of information.

# TABLE OF CONTENTS

**Introduction** ............................................................................................................. 1  

**Session 1: Orientation and Calibration**

Chairman: Camillo Ressl

- **Automatic Image Sequence Registration Based on a Linear Solution and Scale Invariant Keypoint Matching**  

- **Robust Least-Squares Adjustment Based Orientation and Auto-Calibration of Wide-Baseline Image Sequences**  
  H. Mayer, *Bundeswehr University Munich, Germany*  ................................................................. 11

- **Global Uncertainty in Epipolar Geometry via Fully and Partially Data-Driven Sampling**  
  C. Engels, D. Nistér, *University of Kentucky, USA*  ................................................................. 17

**Session 2: Performance Evaluation**

Chairman: Peter Sturm

- **Measuring Complete Ground-Truth Data and Error Estimates for Real Video Sequences, for Performance Evaluation of Tracking, Camera Pose and Motion Estimation Algorithms**  
  R. Stolkin, A. Greig, J. Gilby, *Stevens Institute of Technology, USA, University College London, UK, Sira Ltd., UK*  ................................................................. 25

- **Performance Evaluation of a Localization System Relying on Monocular Vision and Natural Landmarks**  

- **Robust Metric Structure From Motion for an Extended Sequence with Outliers and Missing Data**  

**Session 3: Surface Reconstruction**

Chairman: Olaf Hellwich

- **Direct Shape from Isophotes**  
  V. Dragnea, E. Angelopoulou, *Stevens Institute of Technology, USA*  .................. 45

- **Comparison of Photoconsistency Measures Used in Voxel Coloring**  
  O. Özün, U. Yilmaz, V. Atalay, *Middle East Technical University, Turkey, Berlin University of Technology, Germany*  ................................................................. 51

- **3D Surface Reconstruction Based on Combined Analysis of Reflectance and Polarisation Properties: A Local Approach**  
  P. d’Angelo, C. Wöhler, *DaimlerChrysler Research and Technology, Germany*  .................. 57

- **Comparative Study of Disparity Estimations with Multi-Camera Configurations in Relation to Descriptive Parameters of Complex Biological Objects**  
  M. Nielsen, H.J. Andersen, E. Granum, *Aalborg University, Denmark*  .................. 63

**Author Index**  ............................................................................................................. 69
