

Book Review

Remote Sensing Book 'Fundamentals on Remote Sensing and Methodologies of Application'

By Tania Maria Sausen, Technical Commission VI President

Dr. Mauricio Alves Moreira from the Brazilian Institute for Space Research - INPE, recently published a new book in Portuguese language on Remote Sensing applications. The original title of the book is Fundamentos do Sensoriamento Remoto e Metodologias de Aplicação - Fundamentals in Remote Sensing and methodologies of application. Dr. Moreira has a wide experience in remote sensing teaching and has always noticed the hard time that Brazilian students have in learning about this fascinating field of knowledge in a non native language, since most of the teaching material is written in English. Dr. Moreira is well aware that the learning process is much more efficient when students have good reference material to study, understand and get acquainted with the several remote sensing terms in their own native language. The book has 250 pages and is very well illustrated. Contact the author by e-mail mauricio@itid.inpe.br.
