INVITATION

Developments in technology continue to create new fields in applications and researches made by Geodesy and Photogrammetry Engineering and related disciplines. In recent years, Lidar technology denotes a rapid development for application areas in different fields. I am sure that this workshop, which is organized for a better recognition of this rapidly developing technology and for reaching much more knowledge on its application areas, will be worthwhile not only for private firms but also public organisations. It is a reality that this workshop, which aims to bring together the technology developers, applicators and users, is a step, which fulfils a significant lack in our region. Your attendance to the workshop will be highly appreciated.

Best Regards,

Prof. Dr. Orhan Altan
Head of Division of Photogrammetry
Istanbul Technical University

MEETING VENUE and LANGUAGE

Meeting venue of the Workshop will be at the Oditorium of Istanbul Technical University Culture and Arts Union in Ayazağa Campus of The University.

Simultaneous translations of the Technical Sessions will be provided from Turkish to English and vice versa.
