

**Method Description for the
Vaihingen 2D Semantic Labeling Contest**

Haichang Li, Jinfang Zhang, Hui Zhang

Institute of Software, Chinese Academy of Sciences

The proposed method is based on the PSPNet with multi-scale pooling. According to the constitution of multiple small areas of the remote sensing image, we add a new scale. The PSPNet is fine-tuned on thirteen images of the given training remote sensing data. The reported results are obtained only using the IRRG data. The paper is preparing.
